## 1.0 INTRODUCTION

This Post Construction Report (PCR) has been prepared following the completion of the Elliott Ditch Levee Soil Interim Measures Project (IM Project) in Lafayette, Indiana. Civil & Environmental Consultants, Inc. (CEC) has prepared this PCR on behalf of Arconic Corporation (Arconic). CEC provided site assessment, remedial design, technical and regulatory assistance, and observation services in support of the IM Project and will be providing certification of completion.

### 1.1 PURPOSE

The PCR documents the IM (Interim Measures) activities that were performed to address historic polychlorinated biphenyls (PCBs) impacts to a levee (Site) along Elliott Ditch. The IM Project was performed based on the investigations conducted at the Site as part of ongoing Resource Conservation and Recovery Act (RCRA) Corrective Action associated with the Arconic Lafayette Operations (Facility). Pertinent portions of the Elliott Ditch Levee Soil Interim Measures Work Plan (IMWP) are provided in **Appendix I** for reference purposes. The IMWP was posted to the project repository, on the Elliott Ditch project website (<http://elliottditchproject.cecinc.com/>) for public review and comment. The public comment period was advertised in the Lafayette Journal & Courier and the Lafayette Leader and took place from May 15, 2019, through June 15, 2019. In addition, a public meeting was held on May 29, 2019, to provide an overview of the project and solicit comments from the public. No formal public comments regarding the IMWP were submitted for consideration. Following the public engagement effort, the U.S. Environmental Protection Agency (U.S. EPA) Region 5 provided coordinated approval of the IMWP in accordance with 40 CFR 761.77 after receipt of approval from the Indiana Department of Environmental Management (IDEM) Office of Land Quality (OLQ). The IDEM OLQ is responsible for overseeing the RCRA Corrective Action program at the Facility and SWMU 50, which includes Outfall 001, Elliott Ditch, and Wea Creek located off of Facility property. As such, the IDEM OLQ took primacy on the IM Project. Copies of the IDEM and U.S. EPA, Region 5 approval letters are provided in **Appendix II**.

### 1.2 REPORT CONTENT

This PCR has been prepared to document the successful completion of the IM Project in accordance with the approved IMWP.

Specifically, this PCR includes the following:

1. General Site background and overview of historic investigation activities.
2. Remedial objective and regulatory considerations.

3. Project participants.
4. Project implementation and construction sequencing, including:
  - a. Site preparation;
  - b. Soil removal, management, and disposal;
  - c. Backfilling; and,
  - d. Site restoration and revegetation.
5. Remedial observation, management, public outreach, and analytical testing including:
  - a. Field observations;
  - b. Material tracking;
  - c. Confirmation sampling and results;
  - d. Backfill material sampling and results; and,
  - e. Surveying documentation.
6. Data quality discussion.
7. Photographic documentation.
8. Project certification.

## 2.0 BACKGROUND

### 2.1 FACILITY DESCRIPTION

Arconic, formerly Alcoa Inc., Lafayette Operations, located at 3131 East Main Street in Fairfield Township, Tippecanoe County, Lafayette, Indiana, is engaged in the production of aluminum extrusions serving an international market. Manufactured materials include tube, aerospace components, and oil and gas drilling products. The Facility began production in 1937 and it currently includes 2.3 million square feet of operations on 172 acres. The Facility is located within the northwest 1/4 of Section 34, Township 23 North, Range 4 West on the Lafayette East Indiana, USGS 7.5 Minute Topographic Series Map (Latitude: 040° 23' 26", Longitude: 086° 51' 43"). Topographic relief in the area ranges from approximately 650 to 670 feet above mean sea level (MSL). The location of the Facility and Elliott Ditch are shown on **Figure 1**.

The Facility maintains a National Pollution Discharge Elimination System Permit (NPDES) (Permit Number IN0001210), which includes Outfall 001 that discharges into Elliott Ditch approximately one mile south of the facility. The PCB impacts to levee soil of Elliott Ditch are believed to be associated with historic discharges from Facility Outfall 001. Outfall 001 is also identified on **Figure 1**.

### 2.2 ELLIOTT DITCH BACKGROUND INFORMATION

#### 2.2.1 Description of Elliott Ditch

Elliott Ditch is a tributary to Wea Creek, which is a tributary to the Wabash River, just downstream of Lafayette, Indiana. Refer to **Figure 1** for the location of Elliott Ditch and its associated streams. The ditch is identified as a regulated drain until the 9<sup>th</sup> Street crossing, slightly more than 1.60 miles downstream of Facility Outfall 001. The Tippecanoe County Drainage Board maintains the regulated drains within the county, subject to Indiana Code (IC) 36-9-27. Regulated drains include an easement that typically extends 75 feet from the top of each bank. These easements are intended to provide access for maintenance activities to support proper functionality of the drain. The easement areas have construction restrictions regarding the types of improvements that can be made by private property owners without drainage board approval.

Elliott Ditch receives wastewater and storm water discharges from local, industrial sources some of which are monitored under the NPDES. As previously stated, part of the flow to Elliott Ditch includes receiving water from a NPDES permitted Outfall 001 of the Facility. Discharge from the outfall includes primarily treated sanitary and industrial process water, as well as storm water. The distance from Outfall 001 to the Elliott Ditch and Wea Creek confluence is 4.1 miles, and to the

Wabash River and Wea Creek confluence is 7.5 miles. The geomorphic surface mapping completed for Elliott Ditch by TetraTech CES, as documented in its *Elliott Ditch Geomorphic Surface Mapping and Historic Data Review* dated July 6, 2015, suggests that Elliott Ditch has eight distinct reaches (erosional/depositional regimes) downgradient of the Outfall 001, as identified in the following:

- Reach 1: Outfall 001 to downstream of the railroad bridge;
- Reach 2: The railroad bridge to the South 18th Street Bridge;
- Reach 3: South 18th Street Bridge to upstream of the 9th Street Bridge;
- Reach 4: South 9th Street Bridge to north of Brookside Drive;
- Reach 5: North of Brookside Drive to downstream of Poland Hill Road;
- Reach 6: Downstream of Poland Hill Road to downstream of Old Romney Road Bridge;
- Reach 7: Downstream of Old Romney Road Bridge to upstream of US Hwy 231 South Bridge; and,
- Reach 8: Upstream of US Hwy to the Elliott Ditch – Wea Creek confluence.

This IM Project included remedial activities associated with the removal of levee soil situated on the eastern bank of Elliott Ditch from Outfall 001 (Milepost 0.00) to approximately Milepost 0.50, within Reach 1. This includes a channelized portion of Elliott Ditch that is identified as a regulated drain and therefore subject to IC 36-9-27 statues and enforcement by the Tippecanoe County Drainage Board. Please refer to **Figure 2** for the overview of the levee location.

## 2.2.2 Previous Investigations Summary

### 2.2.2.1 General

Arconic retained CEC to implement the regulatory-approved *Field Sampling Plan* (FSP), as prepared by TetraTech CES and dated February 2, 2016. The FSP was prepared to assess current conditions within Elliott Ditch in support of Facility wide Resource Conservation and Recovery Act (RCRA) Corrective Action (CA). Implementation of the FSP included the assessment of sediment and soil in Reaches 1 through 3 (Milepost 0.00 to 1.59) of Elliott Ditch. A portion of the FSP soil sampling occurred on the levee. CEC performed two, targeted investigations (February and June 2018) after the implementation of the FSP, conducted in October and November 2017, to further assess PCB impacts to levee soil. These targeted investigations followed the Standard Operating Procedures (SOPs) of the FSP to maintain consistency between the different field efforts. The results of implementing the FSP and the two, targeted investigations are summarized in the *Elliott Ditch Reaches 1-3 Field Sampling Report* dated August 2018, as prepared by CEC. The following references were included as appendices in the approved IWMP:

- *Elliott Ditch Geomorphic Surface Mapping and Historic Data Review*, TetraTech CES, July 6, 2015;
- *Field Sampling Plan – Elliott Ditch*, TetraTech CES, February 2, 2016; and,
- *Elliott Ditch Reaches 1-3 Field Sampling Report*, CEC, August 2018.

#### 2.2.2.2 Levee Investigation Results Summary

PCB concentrations impacts exceeding the Risk Based Remedial Objective (RBRO) of 1.0 mg/Kg were observed horizontally throughout the levee. PCB concentrations exceeding more than 50 mg/Kg were observed in five samples, one of which was a duplicate. PCB concentrations exceeding 10 mg/Kg were observed in 11 samples. The PCB impacts to the levee varied in depth and were generally observed in the upper 3 feet of the soil.

Subsurface geology of the levee along Elliott Ditch was indicative of soils introduced through anthropogenic activity. Soils varied in distinct horizons below ground surface and showed evidence of the levee construction through lifts of fill material. For the assessed areas of the levee, a soil horizon of organic material and silty loam was typically present at 0.0 to 0.5 feet below grade. Under this horizon, the majority of soils consist of an aggregate of clay loam, silty clay, and clay with sand. Between 0.5 and 4.0 feet below grade, soils were typically reddish brown or brown to dark brown in color, moderately to very plastic with fine granular structure. Very plastic, black clay with sand was present at some locations along the levee at depths between 2.5 feet and 4.0 below grade. While most samples had gravel content less than 15-percent, isolated horizons less than 0.5 feet in thickness were identified containing greater than 60-percent gravel. This is indicative of the levee construction taking place in lifts and possibly including graveled access roads or varying amounts of aggregate in the fill material.

### 2.3 LEVEE IMWP SUMMARY

Arconic unilaterally decided to remediate PCB impacts on the levee of Elliott Ditch and prepared an IMWP following the FSP results. The objective of the IM Project was to remove PCB impacted soil from the levee portion of Reach 1 of Elliott Ditch that contained concentrations exceeding the RBRO of 1.0 mg/Kg total PCBs, as determined by the geomorphology-based assessments. The scope of work completed in accordance with the IMWP is summarized below:

1. Clear underground utilities and remove overgrown brush, small trees, and other vegetation, as necessary, in support of preparing the Site for excavation activities.
2. Soil requiring excavation and offsite disposal due to detected PCB concentrations was handled based on the concentration at which the PCBs were found, as outlined in 40 CFR 761.61.

3. Temporary storage of excavated, Toxic Substance Control Act (TSCA) regulated soil is subject to the requirements of 40 CFR 761.65(c)(9). Soil stockpiled within the excavation footprint for truck loading purposes was diminished by the end of the working day; therefore, the requirements of 40 CFR 761.65(c)(9) were not applicable during the IM Project.
4. Soil containing less than 1.0 mg/Kg total PCBs were left in place. Once it was confirmed via confirmation sampling that the remediation of the levee soil had achieved the RBRO, the excavation was backfilled with clean, borrow soil, and the levee was restored to pre-project grades.
5. Soil containing greater than or equal to 1.0 mg/Kg and less than 50 mg/Kg total PCBs was excavated and disposed offsite at a RCRA Subtitle D facility, as outlined in 40 CFR 761.61(a)(5)(i)(B)(2)(ii) and §761.61(a)(5)(v)(A). The landfill was notified in writing of the amount and concentration of the waste 15 days prior to the first shipment, as outlined in §761.61(a)(5)(i)(B)(2)(iv).
6. Soil containing greater than or equal to 50 mg/Kg PCBs was excavated and disposed offsite at a RCRA Subtitle C facility, as outlined in 40 CFR 761.61(a)(5)(i)(B)(2)(iii). The disposal facility was notified in writing of the amount and concentration of the waste 15 days prior to the first shipment, as outlined in §761.61(a)(5)(i)(B)(2)(iv).
7. Material shipped offsite was managed in accordance with the storage and disposal requirements defined in 40 CFR 761 Subpart D.
8. Waste disposal records and reports were maintained for PCB remediation waste shipped offsite in accordance with 40 CFR 761 Subpart K.
9. Equipment used during the remediation project that potentially contacted PCB impacted materials was decontaminated following the standards and procedures described in 40 CFR 761.79.

### **3.0 REMEDIAL OBJECTIVE**

The remedial objective for this IM Project was to remove PCB impacted soil from the levee portion of Reach 1 of Elliott Ditch that contained concentrations exceeding RBRO. In order to determine if the remedial objective was achieved, incremental confirmation sampling was performed. Removed soil was managed offsite at appropriately permitted disposal facilities. Specifically, soil exhibiting PCB concentrations greater than or equal to 50 mg/Kg was disposed at a RCRA Subtitle C facility as allowed by 40 CFR 761.61(a)(5). Soil exhibiting PCB concentrations less than 50 mg/Kg but greater than or equal to 1.0 mg/Kg was disposed at a RCRA Subtitle D facility permitted to accept PCB-containing waste.

#### **3.1 REGULATORY CONSIDERATIONS**

##### **3.1.1 RCRA Corrective Action and Coordinated Approval**

Investigations of Elliott Ditch from the early 2000s through 2012 were conducted per the Consent Decree (CD) between Arconic and the U.S. EPA, Region 5. The CD is associated with Clean Water Act findings and these issues are in the process of being closed. The Facility is subject to RCRA CA and is in the process of implementing a RCRA Facility Investigation (RFI). This IM Project was performed as part of the RCRA CA process.

The U.S. EPA exempts PCB waste from the RCRA waste requirements specified in 40 CFR Parts 261 through 265, parts 268, and 270. PCB wastes are instead regulated under the Toxic Substance Control Act (TSCA). The exemption is described in 40 CFR Part 261.8, and includes the notification requirements specified in RCRA. The TSCA regulations governing the manufacturing, processing, distribution in commerce and use prohibitions, including remediation and disposal, are codified in 40 CFR Part 761. Additional TSCA regulatory guidance and criteria used to develop the IM approach is discussed in the following sections.

The IDEM regulates TSCA materials under a partnership with U.S. EPA. U.S. EPA must provide coordinated approval when RCRA CA projects include TSCA materials (i.e., PCBs for this IM Project). The IDEM provided approval of the IMWP in a letter dated January 7, 2020. U.S. EPA subsequently provided coordinated approval in letter dated March 24, 2020.

##### **3.1.2 Risk-Based Closure**

The primary constituents of concern (COCs) at the Facility and Elliott Ditch are PCBs. There are a few options for remediating PCB impacted sites as outlined in the TSCA found in 40 CFR Chapter I, Subchapter R. More specifically, clean up and disposal options for PCB remediation

projects are found in 40 CFR 761.61. A risk-based clean up and disposal approach is presented as an option in 40 CFR 761.61(c) and was the remedial approach implemented during IM Project.

As stated previously, the RBRO for this IM Project was 1.0 mg/Kg. This RBRO was selected based on conversations with the U.S. EPA and the IDEM, including its respective risk assessors, and the use of this objective on other, like projects. The use of this more restrictive RBRO eliminates the need for further risk assessments in association with remedial efforts and not subject the remediated areas to future activity or use restrictions.

### **3.1.3 Proper Disposal of PCB-Impacted Soil**

PCB-impacted soils were excavated and managed offsite at an Arconic approved, and appropriately permitted landfill. Soil exhibiting PCB concentrations greater than or equal to 50 mg/Kg were transported and disposed of at the Heritage Landfill (Heritage) in Roachdale, Indiana, a permitted RCRA Subtitle C Landfill, as allowed under 40 CFR 761.61(a)(5). Soils exhibiting PCB concentrations less than 50 mg/Kg, but greater than or equal to the RBROs, were transported and disposed of at the Oak Ridge Recycling & Disposal Facility (RDF) Facility (Oak Ridge) in Logansport, Indiana, a RCRA Subtitle D Landfill operated by Waste Management.

### **3.1.4 State of Indiana Construction/Land Disturbance Permitting & IDNR Coordination**

The area of disturbance associated with the IM Project exceeded the 1.0-acre threshold for requiring an Erosion and Sediment Control Plan and coverage under the NPDES General Permit Rule Program. Therefore, an Erosion and Sediment Control Plan was implemented in accordance with applicable Indiana Administrative Code (IAC) requirements, specifically outlined in 327 IAC 15-5 (Rule 5) “Stormwater Run-off Associated with Construction Activity”, and local regulations. This process included submitting an Erosion and Sediment Control Plan to the City of Lafayette (City) for review and approval. As a permitted Municipal Separate Storm Sewer System (MS4), the City of Lafayette has established a local program that meets or exceeds the requirements of Rule 5, and includes plan review authority. The plans were reviewed and approved by the City, and a Notice of Intent (NOI) was subsequently filed with IDEM (City Permit Number 12042). **Appendix III** contains the City of Lafayette’s letter of SWPPP compliance, a copy the permit, and NOI filed with the IDEM.

Additionally, the Site was mapped within a regulated floodway. As such, Arconic submitted a Construction-in-a-Floodway Application to the Indiana Department of Natural Resources (IDNR) prior to initiating Site activities. The IDNR issued a Certificate of Approval (Application #: FW-29895-0) effective January 3, 2020. As part of the approval, IDNR requires the implementation of the Floodway Habitat Mitigation Plan, as prepared by Arconic and included as part of the

Construction-in-a-Floodway Application, by the end of fall 2021. The Certificate of Approval is included in **Appendix IV**.

#### 4.0 KEY PROJECT PARTICIPANTS

The Elliott Ditch IM Project's team included the following organizations and key personnel:

<b>Owner:</b>	<b>Arconic Corporation.</b> 2300 North Wright Road Alcoa, Tennessee 37701 Remediation Manager: Robert Prezbindowski	
<b>Regulatory Oversight:</b>	<b>U.S. EPA, Region 5</b> Ms. Jean Greensley 77 W. Jackson Blvd. LU-16J Chicago, Illinois	<b>IDEM OLQ</b> Mr. Don Stilz 100 N. Senate Ave. IGCN 1101 Indianapolis, Indiana
<b>Plans, Drawings, &amp; Specs:</b>	<b>Civil &amp; Environmental Consultants, Inc.</b> 2704 Cherokee Farm Way, Suite 101 Knoxville, Tennessee 37920 Principal: J. Matthew Bruck, P.E. Project Manager: Garrett Welch, P.G. Field Observation: Jenny O'Brien	
<b>Remedial Contractor:</b>	<b>Environmental Field Services</b> 1302 North Meridian Street Indianapolis, Indiana 46202 Project Manager: Eric Likens Site Superintendent: Kevin Chapman	
<b>Surveying:</b>	<b>Fisher Engineering</b> 625 Earl Avenue Suite A Lafayette, Indiana 47904	
<b>Density Testing Contractor:</b>	<b>Patriot Engineering and Environmental, Inc.</b> 717 Farabee Court Suite C Lafayette, Indiana 47905

**Revegetation Contractor:** **Williams Creek Management**  
4620 S. County Road 600 E  
Plainfield, Indiana 46168

## **5.0 PROJECT CONSTRUCTION APPROACH AND SEQUENCING**

The Elliott Ditch IM Project commenced in March 2020 and was completed in August 2020. The IM Project was generally sequenced as follows:

1. Site preparation;
2. Preliminary surveying and Site control;
3. Soil excavation, transportation, and disposal;
4. Water management;
5. Backfill installation;
6. Topsoil installation and revegetation; and,
7. Demobilization

A description of the work performed under these tasks is included in the following sub-sections.

### **5.1 SITE PREPARATION ACTIVITIES**

#### **5.1.1 Mobilization**

Arconic's selected remedial contractor, Environmental Field Services (EFS), mobilized to the Site in March 2020 to begin IM Project activities. Prior to arrival, Arconic obtained Access and Use Agreements with the affected private property owners. Mobilization included personnel, heavy equipment, and supplies. Affected property owners were also notified regarding Site activities prior to mobilization and were provided weekly status updates on the project website, as maintained by CEC, in accordance with the project Community Relations Plan (CRP) dated January 2020.

#### **5.1.2 Clearing and Grubbing**

Trees, shrubs, and plants within the excavation and haul road limits were cleared prior to April 1, 2020. Trees and shrubs were cut by chainsaws approximately two inches above the ground surface. The stump and root balls within the remedial footprint were left in place for removal during excavation of PCB impacted soil. Grasses outside the remedial footprint were mowed down using a brush hog. No heavy equipment was authorized to enter the remedial footprint during clearing and grubbing to prevent against disturbing impacted soil. The cleared trees and shrubs were chipped and used on-Site for ground stabilization.

### 5.1.3 Concord Road Driveway Entrance Expansion

The existing driveway entrance to the Site along Concord Road was expanded to allow safe haul truck access to the Site. The expanded driveway entrance was based upon the Indiana Department of Transportation's (INDOT) Class V Field Entrance specification. EFS obtained a Right of Way permit (Permit Number 11208) from the City of Lafayette prior to completing the entrance expansion. The Right of Way Permit is included in **Appendix V**.

### 5.1.4 Other Site Preparation Activities

Prior to earth-disturbing activities at the Site, erosion and sedimentation controls were installed per the IM Project Storm Water Pollution Prevention Plan (SWPPP). The NPDES Permit and SWPPP were posted inside the Office Trailer. The installation of erosion and sedimentation control features included silt fence and/or straw wattles around perimeter of the Site and the placement of straw bales around private property culverts. A temporary, six feet tall chain link security fence was installed around the Site to reduce the potential for unauthorized access. No trespassing and exclusion zone signage was installed on the security fencing every 50 feet (ft). Additionally, the bank edge to Elliott Ditch was roped off with no trespassing signs. Once soil excavation began, the silt fence/straw wattles and security fence served as the exclusion zone boundary.

A temporary haul road was constructed traversing the length of the IM Project to provide access and to reduce the potential for soil migration offsite (i.e., on vehicle tires). A non-woven geotextile was laid on the ground surface, and approximately 1 foot of stone was installed on top of the geotextile. The stone was mechanically compacted prior to use and was maintained throughout the IM Project. Culvert pipes were extended beneath the haul road to support local drainage from undisturbed areas to Elliott Ditch, as necessary.

A stone laydown area was established at the entrance/exit adjacent to Concord Road. A second entrance was established at 3108 Olympia Drive to allow for efficient use of the haul road (i.e., one-way traffic entering and exiting at different locations). The second entrance was utilized for material delivery, truck tarping, and empty haul truck arrival to the Site. All haul trucks loaded with impacted soil exited via Concord Road. Rumble strips were installed near the Concord Road exit to assist in removing accumulated mud from tires and were crossed by all loaded haul trucks prior to departure to the disposal facility. Prior to the initiation of IM activities, a project information sign was posted at both entrances, as required by the CRP. The sign identified the location as an IM project, provided regulatory contact information, and listed the Elliott Ditch hotline phone number and website address.

A decontamination pad was constructed at the northern edge of the remedial footprint. The pad was constructed with a non-woven geotextile base, covered with a geomembrane liner, and finished with stone. The decontamination pad was graded to drain towards a fluids recovery sump. Prior to the decontamination being used for its intended purpose, accumulated precipitation was removed from the sump and used for dust suppression along the access road. In addition, a water treatment system consisting of a flow meter, cartridge filtration system, carbon vessel, and 21,000 gallon frac tank was assembled, within secondary containment, near the second entrance to treat potentially impacted stormwater from remedial excavation areas and decontamination water, as necessary.

A figure depicting the Site preparation improvements is provided in **Appendix VI**.

## **5.2 PRELIMINARY SURVEYING, INTERMEDIATE SURVEYING, AND SITE CONTROL**

EFS contracted Fisher Engineering (Fisher), a firm with licensed State of Indiana Professional Land Surveyors, to establish survey control at the Site. Fisher performed a pre-construction survey following clearing and grubbing and staked the areas requiring remediation. CEC updated the Project remediation drawings, including the initial excavation elevations and excavation boundaries, following the pre-construction survey. EFS reconciled the field stakes installed by Fisher against the revised remediation drawings. The pre-construction survey is shown in **Figure 3**.

EFS installed a base station on a wooden telephone pole near the second entrance to provide survey-grade accuracy to its GPS-equipped machinery and survey equipment. Throughout the execution of the IM Project, EFS utilized its survey equipment to perform intermediate surveys in order to confirm that the GPS-equipped machinery was functioning properly and document progress. The intermediate survey information was communicated in real-time to the operator and Site superintendent.

## **5.3 SOIL REMOVAL AND MANAGEMENT**

Soil containing total PCB concentrations greater than or equal to the RBRO (1.0 mg/Kg) were targeted for excavation and offsite disposal. The levee was divided into eight areas (Areas A-H) and further separated into 11 decision units (DUs), with each DU being less than or equal to a quarter of an acre in size. The DUs were established in accordance with with the Interstate Technology Regulatory Council (ITRC) *Incremental Sampling Methodology* (ISM) document dated February 2012. The confirmation sampling approach is further discussed in Section 6.3. The location of the areas and DUs are shown in **Figure 3**.

Soil excavation began at the southern limits (Area H) of the IM Project and proceeded to the north toward Concord Road (Area A). Soil was excavated using a GPS-equipped excavator and loaded directly into dump trucks/semi-trucks for off-Site disposal. Results of previous investigation activities identified two locations where total PCBs were quantified at concentrations  $\geq 50$  mg/Kg (i.e., TSCA regulated soil). The two locations were within Area B and Area D (DU03, DU05, and DU06). The remaining areas and DUs contained non-TSCA soil (i.e., PCBs  $< 50$  mg/Kg). EFS utilized two excavator buckets during excavation activities; one bucket for TSCA soil, and the other for non-TSCA. Each haul truck/semi-truck was lined with poly sheeting prior to being loaded with impacted soil and was tarped prior to leaving the Site. Loads were transported under manifest and the haul trucks were appropriately placarded.

Preliminary excavation elevations were established based upon laboratory analytical results from the field sampling events. These elevations were defined within the remediation project drawings and were available on an in-cab display in the GPS-equipped excavator to guide the operator. Preliminary excavation depths ranged from less than 1 foot below grade, to up to 3.5 feet below grade (depending upon the area and surrounding topography). Once the preliminary excavation elevation was achieved, incremental confirmation sampling was performed to determine if additional excavation was required. In general, the areas were over-excavated an additional 6 inches following a result greater than the RBRO. However, depending upon the laboratory quantification of the total PCB concentration observed in the confirmation samples, along with soil type changes observed in the field, greater than 6 inches of over-excavation was performed in some areas in an attempt to reduce the potential for additional over-excavation and to achieve the RBRO more quickly. The post-excavation surface is shown in **Figure 4**. The TSCA and non-TSCA soil removal quantities are discussed in more detail below. Details regarding the confirmation sampling, including the results, can be found in **Section 6.4**.

### 5.3.1 Heavy Equipment Decontamination

Heavy equipment decontamination was required prior to the execution of the following:

- Mobilization of heavy equipment (i.e., specifically, the excavator and/or skid-steer) on the haul road if the equipment was operated in an impacted area;
- Mobilization between known TSCA and non-TSCA locations; and,
- Demobilization of heavy equipment off-Site.

Mobilization of the excavator and skid-steer involved the gross decontamination of their tracks prior to entry onto the haul road. This was accomplished by staging the equipment on poly-sheeting and utilizing electric hammer chisels to remove any lodged soil. Dislodged soil was collected on the poly-sheeting and properly disposed. As stated previously, EFS utilized two excavator buckets, one for TSCA soils and one for non-TSCA. Heavy equipment involved in the excavation process was prohibited from tracking on areas where the RBRO was achieved, or

laboratory analytical results were pending. Prior to demobilization off-Site, heavy equipment tracks and excavator buckets were grossly decontaminated and wiped with diesel rags in accordance with 40 CFR 761.79 *Decontamination Standards and Procedures*. EFS did not generate any decontamination water during the decontamination process. As such, the decontamination pad was not utilized.

### **5.3.2 Impact Soil Management [ $<50$ and $\geq$ RBROs PCBs (RCRA Subtitle D Landfill)]**

A waste profile (Profile Number 614725IN) was established with Waste Management prior to shipment of material. Waste Management was notified 15 days prior to the first shipment of material. The waste profile along with the 15 day notification has been included in **Appendix VII**. Removed materials with PCB concentrations less than 50 mg/Kg and greater than 1.0 mg/Kg were transported via haul trucks operated by Solid Finish Construction. EFS personnel lined the bed of each haul truck prior to loading. After loading was complete, residual bulk material was removed from the side-rails of the haul trucks, as necessary. Soil removed as part of these efforts was managed as non-TSCA.

Each load was transported under an industrial waste disposal manifest to Oak Ridge, which is operated by Waste Management. Oak Ridge is a Subtitle D facility located at 2905 S 150 E, Logansport, Indiana 46947. The landfill weighed each haul truck and provided the weights to EFS on a daily basis.

In total, 11,557.75 tons of non-TSCA, PCB-impacted soil were transported offsite for disposal from the levee. This is 6,637.75 tons more than estimated in the IMWP. The additional material is related to over-excavation and subsequent disposal due to failed confirmation samples. With the exception of DU08, each DU required at least one over-excavation. A weight summary of non-TSCA soil hauled offsite for disposal by area/date can be found in **Tables 1** and **2**, respectively. **Appendix VII** contains a summary of shipments table, shipping manifests and scale tickets for this material.

### **5.3.3 Impacted Soil Management [ $\geq 50$ PPM PCBs (RCRA Subtitle C/TSCA Landfill)]**

A waste profile was established with Heritage prior to shipment of material. Heritage was notified 15 days prior to the first shipment of material. The waste profile and notification can be found in **Appendix VIII**. Removed materials with PCB concentrations greater than or equal to 50 mg/Kg were transported via semi-trucks with lined trailer beds operated by Heritage Transport, LLC (EPA ID No. IN058484114), a licensed hazardous waste hauler. Heritage Transport was responsible for lining their semi-trucks prior to arrival. After loading was performed, residual bulk material was removed from the side-rails of the semi-trucks, as necessary. Soil removed as part of these efforts was managed as TSCA. Prior to departing from the Site, the drivers would perform a general

inspection of the truck and tarp the load. The semi-trucks were also equipped with bed scales to assess the weight of the material prior to departure.

Each load was transported under waste manifest, signed by EFS, to Heritage, a RCRA Subtitle C (IND980503890) facility located at 4370 W County Road 1275 N, Roachdale, Indiana 46172. Heritage weighed each semi-truck and provided the weights to EFS daily basis. The TSCA manifests contained prepopulated estimated tonnages (i.e., 20,000 tons) that were amended based on the actual scale weight of the receiving facility by Heritage following Arconic authorization.

In total, 2,725.77 tons of TSCA, PCB-impacted soil were transported offsite for disposal from the levee. This is 1,965.77 tons more than estimated in the IMWP. The additional material is related to excavation activities being performed deeper than anticipated in the IMWP. Following the initial removal of TSCA material in Area B and Area D (i.e., DU03, DU05, and DU06), analytical results revealed that over-excavation was required. However, the highest total PCB concentration quantified in the confirmation samples from these failed DUs was 10.3 mg/kg from sample *ED-DU03-Secondary-Composite*. Since this concentration was well below 50 mg/kg, and the remedial excavation was beyond the depth of deepest sample that was quantified with a PCB concentration exceeding 50 mg/Kg from the field sampling characterization effort, the material generated as part of over-excavation activities was managed as non-TSCA. A weight summary of TSCA soil hauled offsite for disposal by area/date can be found in **Table 1** and **Table 2**, respectively. The disposal profile, summary of shipments table, waste manifests, scale tickets, and a certificate of disposal can be found in **Appendix VIII**.

## **5.4 WATER REMOVAL AND MANAGEMENT**

Due to the nature of the levee soils, precipitation infiltrated and did not accumulate within open excavations during the IM Project. As such, precipitation did not require collection and treatment in the waste water treatment system established during Site preparation activities. In addition, EFS did not generate waste water as part of heavy equipment decontamination activities as previously discussed in Section 5.3.1.

## **5.5 BACKFILLING AND REVEGETATION**

### **5.5.1 Levee Backfilling**

After sampling demonstrated that the RBRO had been achieved, EFS restored the levee with virgin backfill sourced from Purdy Materials in Lafayette, Indiana. Prior to delivery of the backfill to the Site, the backfill was tested for PCBs as well as geotechnical properties including standard proctor, grain size, plasticity, and ignition loss. PCBs were not detected within the backfill samples and

the geotechnical results indicated that the soil was suitable for backfill use. Backfill soil environmental and geotechnical testing results are provided in **Appendix IX**.

Backfill was installed to pre-excavation elevations based on Fisher's pre-construction survey, at a minimum. The material was installed using GPS driven equipment in loose lifts not exceeding 9 inches per lift. In order to achieve 95% of maximum density per the Standard Proctor test, each lift was compacted with at least three passes of the vibratory, smooth drum roller. A CAT D5-dozer (dozer) was utilized on the levee side slope (3:1 slope) perpendicular to Elliott Ditch due to access concerns with using the smooth drum roller. Patriot Engineering and Environmental, Inc. (Patriot) performed in place soil density testing to confirm the methodology was sufficient to achieve the 95% of Standard Proctor requirement. The density testing reports are included in **Appendix IX**.

According to Fisher's post-backfill survey, EFS installed approximately 8,168 cubic yards of clean backfill at the Site. The post-backfill survey is shown in **Figure 5**.

### **5.5.2 Topsoil Placement**

Following backfill installation, EFS placed a loose lift of at least 3 inches of topsoil and performed final grading with a dozer. The top soil was evaluated for PCBs as well as organic content, particle size distribution, and pH prior to purchase from Winstead Enterprises, Inc (Winstead). Winstead sourced the top soil from a borrow location in Lafayette, Indiana. The underlying backfill layer was prepared, i.e. loosening with the dozer teeth, prior to topsoil placement. The results of the top soil evaluation are provided in **Appendix X**.

According to Fisher's as-built survey, EFS installed approximately 884 cubic yards of top soil at the Site. The as-built survey is shown in **Figure 6**.

### **5.5.3 Erosion Control Inspections and Project Area Revegetation**

Site erosion and sedimentation controls were installed, inspected, and maintained in accordance with the Project Stormwater Pollution Prevention Plan (SWPPP). All erosion and sedimentation controls were formally inspected by EFS at least once each week and/or within 24 hours of any precipitation event of at least 0.5 inch of rainfall as required by the SWPPP. All SWPPP inspections were documented and maintained by EFS. Any necessary, repairs were performed in a timely fashion. Additionally, EFS used a water truck to spray water on the haul road for dust suppression.

After restoration activities were completed, EFS subcontracted Williams Creek Management (Williams Creek) to revegetate the levee via hydroseeding. The hydroseeding application

consisted of 90% turf-type tall fescue varieties and 10% Kentucky Bluegrass, mulch fiber blended with a tackifier, and a soil/nutrient optimizer.

Routine inspections of the Site were performed by EFS until it was determined that the Site had achieved 70% vegetative coverage at which point erosion and sedimentation control features were removed. An executed Notice of Termination (NOT) was provided to the City of Lafayette (i.e., Lafayette Renew) in letter dated November 5, 2020. Lafayette Renew ultimately is responsible for final submittal to IDEM. A copy of the executed NOT is provided in **Appendix III**.

## **5.6 DEMOBILIZATION**

Arconic opted to leave the constructed haul road, laydown area, and the unused decontamination pad in place for the next phase of the Elliott Ditch remediation effort. Out of an abundance of caution, samples of the haul road and laydown area were collected for PCBs to assess if incidental spillage during transportation and disposal activities adversely impacted the stone material. One composite sample was collected in proximity to the TSCA excavation areas and one composite sample near the exit rumble strip for total PCBs. Laboratory analytical results were non-detect for PCBs. An analytical summary table and the associated analytical reports are included in **Appendix XI**.

EFS personnel demobilized from the Site immediately following revegetation activities. All equipment, materials, and supplies were also demobilized from the Site including the security fencing and IM Project signage. The Site was restored to preconstruction conditions with the exception of the Site features discussed above.

## 6.0 CONSTRUCTION OBSERVATION, MANAGEMENT, AND CONFIRMATION SAMPLING

Construction quality assurance was conducted throughout the Elliott Ditch Levee IM Project planning, development, and implementation. Provided in the following subsections are descriptions of the specific efforts that were taken to confirm that the IM Project was conducted according to the IMWP.

### 6.1 FIELD OBSERVATION/DOCUMENTATION

CEC provided observation of EFS during the execution of the Elliott Ditch Levee IM Project. CEC personnel observed the daily activities of EFS and provided notes in the form of Daily Reports. The Daily Reports included descriptions of work activities performed, summary of pertinent discussions, documentation of decisions, agreements or changes that were made, excavation and confirmation sampling progress, analytical results, and/or photographs that were collected. Copies of the Daily Reports are provided in **Appendix XII**.

### 6.2 MATERIAL TRACKING

EFS was responsible for disposing of waste materials generated as part of the IM Project, as well as performing the associated tracking. These responsibilities included the preparation of waste manifests, signature on behalf of the generator, documenting the weight of TSCA material that was leaving the Site, and receiving final disposal information from the receiving facilities. Offsite tracking was completed via waste manifesting (TSCA material), industrial waste Disposal manifest (non-TSCA material), and weight tickets for each individual load. Arconic received the final, signed copies of the waste manifest and certificate of disposal for the TSCA materials. **Tables 1 and 2** provide waste tracking information. Provided in **Appendix VII** are the manifests and scale tickets for the non-TSCA material. **Appendix VIII** contains the waste manifests, scale tickets, certificates of disposal associated with offsite disposal of TSCA material.

### 6.3 CONFIRMATION SAMPLING

Confirmation sampling was performed per the IMWP to verify the remedial objective was achieved. Confirmation sampling was conducted in accordance with the ITRC *ISM* document dated February 2012. The excavation footprint was divided into 11 designated DUs (DU01 through DU11). The locations of the DUs are shown in **Figure 3**. Each DU was further divided into grid squares (i.e., increments) of approximately the same square footage. The table below identifies the number of grids per DU by area.

**Grids per Decision Unit**

Area	Decision Unit	# of Grids
A	01	21
B	02	26
B	03	26
C	04	32
D	05	24
D	06	24
E	07	20
F	08	26
F	09	26
G	10	24
H	11	24

The center of the grid was located by handheld GPS and marked with a survey flag. Within each grid, primary, secondary, and tertiary samples were collected at random while maintaining at least 3 feet of separation from one another. Samples were collected by advancing a 2 inch metal coring device 3 inch below the excavation bottom. Three separate coring devices were utilized during sample collection (i.e., one for the primary samples, one for the secondary, and one for tertiary). Each coring device was grossly decontaminated between grids. After collecting the final primary, secondary, and tertiary incremental sample from a DU, the coring devices were decontaminated using brushes, an Alconox and distilled water mixture, and rinsed with clean distilled water. This resulted in 3-5 gallons of decontamination water being generated on days when confirmation sampling was performed. This water was placed on impacted soil that was hauled off-Site for disposal.

After the sample cores were recovered from a DU, the increments were placed into laboratory provided containers, labelled with the DU and grid number/sample type (primary, secondary, or tertiary sample), and stored on ice for shipment to Waypoint Analytical (Waypoint) under proper chain-of-custody (COC) control for incremental sample processing and total PCB analysis.

In order to correlate grids and sample type for laboratory analysis, a standard nomenclature for each sample container was established and utilized on the laboratory COC. The nomenclature specifically highlights the DU, excavation number, grid, and sample type. For example, “ED-DU06\_02 – 09P” sample ID can be broken down as follows:

- “ED” – Elliott Ditch;
- “DU06” – Decision Unit Number 06;
- “\_02” – first over-excavation of the DU;
- “09” – grid number 09; and

- “P” – Primary sample (P = Primary, S = Secondary, and T = Tertiary)

Upon arrival of the samples to Waypoint, the laboratory processed the individual increment samples and composited them into three samples (i.e., the primaries were all composited together, followed by secondaries, and tertiaries) in accordance with their SOP for Incremental Sampling Method Sample Preparation. This SOP has been provided in **Appendix XIII**. Laboratory processing of each incremental sample was performed as follows:

1. Initial sample screening – The increments were subjected to the removal of rocks, vegetative debris (roots, sticks, leaves, etc.), and water decanted prior to processing.
2. Sample conditioning – The increments were oven dried at 103 degrees Celsius (°C). No percent moisture analysis was performed since water was removed from the increments during this step and prior to analytical testing for PCBs.
3. Particle size reduction and selection – The increments were subjected to particle size reduction. The increment was then passed through a #60 sieve [250 micrometer (µm)]. Material that did not pass was subjected to further particle size reduction and again attempted to pass through the #60 sieve. This process was continued until as much of the increment could be passed through the sieve as practicable.
4. Sample mixing – Each of the increments was then mixed by tumbling in a container with adequate headspace. This homogenized the increments prior to splitting and subsampling.
5. Splitting and subsampling – The increments were then split, including compositing, using a riffle splitter or two dimensional slab cake. A subsample was then selected after splitting and subjected to further splitting and the process repeated until approximately 30 grams of the incremental sample remained, at which point it was subjected to analytical testing.
6. Quality Assurance/Quality Control (QA/QC) samples: CEC identified duplicate samples and Matrix Spike/Matrix Spike Duplicate (MS/MSD) sample locations on the COC. Waypoint generated these QA/QC samples once sample processing was completed.

From incremental sample collection to the receipt of laboratory analytical results, a total of five working days were required. Laboratory analytical results were compared to the RBRO. In order for a DU to “pass”, all samples had to meet the RBRO (i.e., primary, secondary, tertiary, and duplicate, if applicable). Failure of one sample required over-excavation and resampling of the failed DU.

A total of 84 confirmation samples were processed and analyzed for PCBs by Waypoint. A summary of the confirmation sampling analytical results can be found in **Table 3**. As identified in the table, samples that are highlighted in red indicate an exceedance of the RBRO (i.e., 1.0 mg/Kg). The final sample nomenclature includes the DU location as well as highlights if the sample was the primary, secondary, or tertiary. In addition, over-excavation sample results are denoted with a \_02, \_03, or \_04 designation (i.e., first over-excavation, second over-excavation,

third over-excavation, receptively). The analytical reports associated with these results are provided in **Appendix XIV**.

### **6.3.1 Management of Decision Unit RBRO Exceedances**

Management of RBRO exceedances in a DU occurred by implementing a sequence of over excavation followed by the collection of supplementary incremental samples. This work sequence continued across the levee geomorphic footprint until the ISM result for each DU, including duplicate results, were below the RBRO. No site features/obstructions resulted in the inability to collect all appropriate sample increments for ISM analysis. As such, each DU was appropriately assessed in accordance with ISM criteria to evaluate the presence of soils above the RBRO. Based upon sampling results, no RBRO exceedances remain along the levee geomorphic footprint.

## **6.4 SURVEYING**

Pre-project, post-excavation, post-backfill surveying, and as-built surveying was conducted by a State of Indiana Professional Land Surveyor from Fisher. Intermediate surveys were performed by EFS to confirm that machine control and field survey equipment were in agreement during excavation activities. The post-excavation survey (see **Figure 4**) was used to estimate the volume of material removed from the levee. The post-backfill survey (see **Figure 5**) was used to confirm the placed backfill, and the as-built survey was used to estimate top soil volume, as well as to document the conditions immediately following the IM Project.

## 7.0 DATA QUALITY

Data quality objectives (DQOs) were evaluated by assessing the following quality indicators: precision, accuracy, representativeness, completeness, and comparability.

### 7.1 PRECISION

Precision is a measure of the reproducibility of analyses under a given set of conditions (i.e., the degree to which two or more measurements are in agreement). Precision evaluates how far different individual reported values are from the average or mean. Precision is thus a measure of the magnitude of random error and will be expressed as the relative percent difference (RPD). The lower the RPD value is, the more precise (i.e., reproducible) the data.

Precision is evaluated using the RPD, which is determined according to the following equation:

$$RPD = \frac{|Value\ 1 - Value\ 2|}{Arithmetic\ Mean\ of\ Value\ 1\ and\ 2} \times 100$$

The equation above is appropriate when the analytical results are greater than 5 times the reporting limit. For results that are near the limit of quantitation, acceptable precision is demonstrated by the absolute value of the difference between Value 1 and Value 2 being within two times the RL. For results that are reported between the RL and the method detection limit (MDL), precision is considered poor by definition (i.e., the results are considered quantitatively acceptable in that a constituent can be identified, but are quantitatively suspect since the concentration cannot be accurately quantified). This is the reason that results between the RL and the MDL are “J” flagged as estimated. No “J” flagged estimates were reported for the confirmation samplings during the IM Project.

For this IM Project, duplicate samples were collected at a rate of approximately one duplicate sample for every 20 confirmation samples analyzed. A total of 5 duplicate samples were collected from the levee excavation. Acceptable precision for soil duplicates is typically RPD < 40 percent.

Of the 5 duplicates, the RPD was calculated for 3 of them due to non-detects in the other 2 samples. The RPD demonstrated a difference within two times the RL in each of the duplicate pairs. As such, the data is considered adequately precise.

### 7.2 ACCURACY

Accuracy is a measure of the bias that exists in a measurement system (i.e., the degree of agreement between an observed value and a reference or true value). Accuracy measures the average or

systematic error of a measurement method or sampling method. Accuracy in the field is determined through the collection of equipment and trip blanks and review of the results for evidence of sample contamination stemming from field activities or sample transport.

Non-disposable sampling equipment utilized throughout the IM Project was thoroughly cleaned between each sampling location, thus minimizing the potential for impacts to sampling stemming from field activities. An equipment blank sample was collected after each DU by pouring distilled water over the decontaminated metal coring devices. A total of 28 equipment blank samples were submitted for analysis of PCBs. All equipment blanks were detected below laboratory method detection levels of 0.0005 mg/L. Given the non-detect concentrations of PCBs in the equipment blank samples, cross-contamination of soil samples from the sampling equipment is not expected. Since volatile organic compound (VOC) sampling was not completed, trip blanks were not collected.

### **7.3 REPRESENTATIVENESS**

Representativeness expresses the degree to which data accurately and precisely represents the environmental condition. Representativeness is accomplished by maintaining sample integrity with appropriate preservation and meeting technical holding times and by collecting a statistically significant number of samples. Field representativeness is dependent upon the proper design of the sampling program and will be satisfied by following proper sampling technique.

Field work was conducted in accordance with the regulatory-approved IMWP. Samples were collected using laboratory provided containers, preserved in a cooler on ice, and were immediately delivered to the laboratory within specified hold times. Sample locations were determined in the field based on the sampling plan outlined in IMWP to evaluate the excavation extents for remaining PCB impacts.

A total of 2,094 sample increments were collected and submitted to Waypoint for sample processing, compositing, and subsequent PCB analysis. The sample increments were shipped via FedEx overnight shipping from Lafayette, Indiana to Waypoint located in Memphis, Tennessee. Waypoint noted the following items upon sample receipt:

- Two glass sample jars were broke during shipment.
  - Both sample increments were recollected in the field and resent to the laboratory for processing and analysis.
- Three glass sample jars contained suspected cooler water (i.e., melted ice included for sample preservation) despite being double bagged prior to shipment.
  - If the water in the sample jars was from the melted ice, it is unlikely that the ice contained PCBs. Furthermore, sample conditioning (i.e., drying) was completed by the laboratory which would have removed any residual water/moisture. As such,

CEC does not consider these sample increments compromised, nor do the sample increments have an impact on the validity of the sampling results.

- One sample cooler set (i.e., two coolers) associated with DU04\_03 was delayed in transit and arrived to the laboratory out of temperature range (i.e., 23.4°C and 24.4°C, respectively).
  - Since PCBs are not volatile, PCB loss due to being outside of temperature range is unlikely. CEC does not consider the sample increments from this cooler set compromised, nor do the sample increments have an impact on the validity of the sampling results.

All analytical results associated with this IM Project are considered to be representative of the completed excavations.

#### **7.4 COMPLETENESS**

Completeness is the measurement of the amount of valid data obtained from a measurement system compared to the amount that was expected to be obtained under “normal” conditions. Confirmation samples were collected from every excavation bottom in accordance with the IMWP, including from over-excavation bottoms. The dataset for the IM Project is considered complete.

#### **7.5 COMPARABILITY**

Comparability expresses the confidence with which one set of data can be compared to another. It is a qualitative measurement to ensure sampling and analytical procedures are consistent within and between data sets, such as split sampling or monitoring. Analytical data is comparable when similar sampling, analytical methods, and reporting limits are consistently used for assessments of the IM Project excavation areas. Comparability was controlled by requiring the use of specific nationally recognized analytical methods and requiring consistent method performance criteria.

Sampling was conducted in accordance with the approved IMWP. Additionally, Waypoint analyzed all environmental samples from this Project using the U.S. EPA Method 8082 procedure for PCBs. Thus, the data set is considered comparable.

## 8.0 PHOTOGRAPHIC DOCUMENTATION

Photographs were taken by CEC personnel throughout the IM Project. In particular, the following key tasks were photographed and are provided in **Appendix XV** for reference:

- a) Vegetation clearing;
- b) Concord Road driveway expansion;
- c) Haul road and Site improvements;
- d) Excavation activities;
- e) Confirmation sampling;
- f) Backfill/topsoil material import and installation; and,
- g) Revegetation.

9.0 PROJECT CERTIFICATION

I certify that, to the best of my knowledge, after thorough investigation, the information contained in or accompanying this certification is true, accurate, and complete.

## 1.0 INTRODUCTION

### 1.1 GENERAL

Arconic Inc. (Arconic), formerly Alcoa Inc., Lafayette Operation (Facility), located at 3131 East Main Street in Fairfield Township, Tippecanoe County, Lafayette, Indiana is engaged in the production of aluminum extrusions serving an international market. Manufactured materials include tube, aerospace components, and oil and gas drilling products.

The purpose of this Interim Measures Work Plan (IMWP) is to outline the approach for the remediation of PCB impacted soil on a levee of Elliott Ditch. These impacts are believed to be in association with historic discharges from Outfall 001 into Elliott Ditch from the Facility. A risk-based remedial approach, as identified in 40 CFR 761.61(c), is proposed for the levee soil. This IMWP is being submitted to the Indiana Department of Environmental Management (IDEM) and the U.S. Environmental Protection Agency (USEPA) to satisfy the notification requirements in 40 CFR 761.61(c). The remedial strategy is to remove the PCB impacted soil to meet the project-specific, risk-based remedial objective (RBRO) for PCBs. The removed materials will be managed off-site at an appropriately permitted facility.

#### 1.1.1 Facility Description

Arconic began production at the Facility in 1937 and currently it includes 2.3 million square feet of operations on 172 acres. The Facility is located within the northwest 1/4 of Section 34, Township 23 North, Range 4 West on the Lafayette East Indiana, USGS 7.5 Minute Topographic Series Map (Latitude: 040° 23' 26", Longitude: 086° 51' 43"). Topographic relief in the area ranges from approximately 650 to 670 feet above mean sea level (MSL). The locations of the Facility and Elliott Ditch are shown on **Figure 1**.

#### 1.1.2 Description of Elliott Ditch

Elliott Ditch is a tributary to Wea Creek, which is a tributary to the Wabash River, just downstream of Lafayette, Indiana. Please refer to **Figure 1** for the location of Elliott Ditch and its associated streams. The ditch is identified as a regulated drain until the 9<sup>th</sup> Street crossing, slightly more than 1.60 miles downstream of Facility Outfall 001. The Tippecanoe County Drainage Board maintains the regulated drains within the county, subject to Indiana Code (IC) 36-9-27. Regulated drains include an easement that typically extends 75 feet from each bank. These easements are intended to provide access for maintenance activities to support proper functionality of the drain. The easement areas have construction restrictions regarding the types of improvements that can be made by private property owners without drainage board approval.

In addition to its base flow, Elliott Ditch receives wastewater and storm water discharges from local, industrial sources that are monitored under the National Pollution Discharge Elimination

System (NPDES). This includes receiving water from a NPDES permitted outfall (Outfall 001) of the Facility. Water from Outfall 001 discharges to Elliott Ditch approximately 1-mile south of the Facility. Discharge from the outfall includes treated sanitary and industrial process water, as well as storm water. The distance from Outfall 001 to the Elliott Ditch and Wea Creek confluence is 4.1 miles and to the Wabash River and Wea Creek confluence is 7.5 miles. The geomorphic surface mapping completed for Elliott Ditch by TetraTech CES, as documented in its *Elliott Ditch Geomorphic Surface Mapping and Historic Data Review* dated July 6, 2015, suggests that Elliott Ditch has eight distinct reaches (erosional/depositional regimes) downgradient of the outfall:

- Reach 1: Outfall 001 to downstream of the railroad bridge;
- Reach 2: The railroad bridge to the South 18th Street Bridge;
- Reach 3: South 18th Street Bridge to upstream of the 9th Street Bridge;
- Reach 4: South 9th Street Bridge to north of Brookside Drive;
- Reach 5: North of Brookside Drive to downstream of Poland Hill Road;
- Reach 6: Downstream of Poland Hill Road to downstream of Old Romney Road Bridge;
- Reach 7: Downstream of Old Romney Road Bridge to upstream of US Hwy 231 South Bridge; and,
- Reach 8: Upstream of US Hwy to the Elliott Ditch – Wea Creek confluence.

This IMWP is for levee soil, which is situated on the eastern bank of Elliott Ditch from near Outfall 001 (Milepost 0.00) to approximately Milepost 0.50, within Reach 1. This includes a channelized portion of Elliott Ditch that is identified as a regulated drain and therefore subject to IC 36-9-27 statues and enforcement by the Tippecanoe County Drainage Board. Please refer to **Figure 2** for the extent of the levee that is subject of this IMWP.

## **1.2 CONSENT DECREE AND RCRA CORRECTIVE ACTION**

Investigations of Elliott Ditch from the early 2000s through 2012 were conducted per the Consent Decree (CD) between Arconic and the USEPA. The CD is associated with Clean Water Act findings and these issues are in the process of being closed. The Facility is subject to Resource Conservation and Recovery Act (RCRA) Corrective Action (CA) and is in the process of implementing a RCRA Facility Investigation (RFI). This Interim Measures (IM) Project is being performed as part of the RCRA CA process.

## **1.3 RISK-BASED REMEDIATION**

The primary constituents of concern (COCs) at the Facility and Elliott Ditch are PCBs. There are a few options for remediating PCB impacted sites as outlined in the Toxic Substances Control Act (TSCA) found in 40 CFR Chapter I, Subchapter R. More specifically, clean up and disposal options for PCB remediation projects are found in 40 CFR 761.61. A risk-based clean up and

disposal approach is presented as an option in 40 CFR 761.61(c) and is the remedial approach being implemented by this IM Project. An entity wishing to perform a remedial project using the risk-based approach is required to request and receive approval from the USEPA prior to conducting the project in this manner.

The RBRO for this IM Project and subsequent soil and sediment remediation projects at Elliott Ditch is 1.0 mg/Kg. This RBRO has been selected based on conversations with the USEPA and the IDEM, including its respective risk assessors, and the use of this objective on other, like projects. The use of this more restrictive RBRO will eliminate the need for further risk assessments in association with remedial efforts and not subject the remediated areas to future activity or use restrictions.

## 2.0 ELLIOTT DITCH FIELD SAMPLING ASSESSMENT

### 2.1 GENERAL

Arconic is in the process of conducting SWMU and AOC investigations to assess current conditions and potential releases in support of the RCRA Corrective Action process. Arconic retained Civil & Environmental Consultants, Inc. (CEC) to implement the regulatory-approved *Field Sampling Plan* (FSP), as prepared by TetraTech CES and dated February 2, 2016. Implementation of the FSP included the assessment of sediment and soil in Reaches 1 through 3 (Milepost 0.00 to 1.59) of Elliott Ditch. A portion of the FSP soil sampling occurred on the levee. CEC performed two, targeted investigations (February and June 2018) after the implementation of the FSP, conducted in October and November 2017, to further assess PCB impacts to levee soil. These targeted investigations followed the Standard Operating Procedures (SOPs) of the FSP to maintain consistency between the different field efforts. The results of implementing the FSP and the two, targeted investigations are summarized in the *Elliott Ditch Reaches 1-3 Field Sampling Report* dated August 2018, as prepared by CEC. The following references are included as appendices to provide the necessary background information for this IMWP:

- *Elliott Ditch Geomorphic Surface Mapping and Historic Data Review*, TetraTech CES, July 6, 2015 (Appendix I);
- *Field Sampling Plan – Elliott Ditch*, TetraTech CES, February 2, 2016 (Appendix II); and,
- *Elliott Ditch Reaches 1-3 Field Sampling Report*, CEC, August 2018 (Appendix III).

### 2.2 INVESTIGATION STRATEGY

The FSP was designed based on geomorphic principals, which influenced the sampling locations and depth intervals. The strategy for the FSP was developed following a stepwise process that included the following.

1. Use of fluvial geomorphology to define the erosional and depositional patterns for Elliott Ditch and its floodplain. This step included a desktop review, field survey to verify the results of the desktop review, and identification of sample transects and sample locations perpendicular to the stream. The sample locations were selected to assess the various geomorphic surfaces and erosional and depositional features of the ditch.
2. The second step of the investigation strategy was to use the geomorphic characteristics of Elliott Ditch to determine the area of investigation. The Elliott Ditch area of investigation includes the channel, the floodplain, and terrace surfaces to the upland boundary. The in-channel area includes the parts of the ditch that have deposits of silt and clay because PCBs absorb to these particle sizes. In the overbank areas, flood deposits on the floodplain and terraces during and after the time of release may also be subject to PCB deposition.

3. The third step of the investigation strategy was to assess what portion of the channel and overbank could be remediated in a single field season.

The sample locations were selected in depositional areas to assess the materials for the concentration of PCBs. An important part of the sampling strategy was to sample in areas that are not depositional to prove the absence of PCBs. This approach allows for confirmation of the erosional surfaces and a confidence that the fluvial geomorphology model of the stream is accurate. Additionally, the sampling strategy was designed to allow for iterative sample locations to be incorporated into the FSP based on data obtained during the field work and the analytical results. This aspect was applied during the two, targeted investigations.

Sample intervals varied based on the thickness of the soil horizon/sediment layer. The focus of the investigations was to understand the depositional pattern(s) and this was accomplished by sampling specific soil horizons and sediment layers. The horizon/layer based sampling provides a context of the geomorphic and pedogenic (soil profile) environment and allows an accurate assessment to characterize the PCB distribution. The fluvial geomorphology approach is beneficial to determine where PCBs may be located in Elliott Ditch and its floodplain and why the deposits are located where they are. In any investigation, a limited number of sample locations are collected to characterize a large area. It is important to have a scientific method to interpolate or extrapolate data from where it was collected to the other areas of the project.

### **2.3 INVESTIGATION SCOPE**

The FSP and two subsequent, targeted investigations were conducted within and along the first 1.59 miles (Reaches 1 through 3) of Elliott Ditch. Provided in the following is a summary of the field activities performed in association with each assessment.

#### FSP Implementation

- Sediment piling and surveying;
- Sediment boring installation and sampling at 13 locations; and,
- Soil boring installation and sampling at 33 locations.

#### February 2018 Targeted Assessment

- Sediment boring installation and sampling at one location; and,
- Soil boring installation and sampling at 11 locations, including a boring at one previously assessed location.

#### June 2018 Targeted Assessment

- Soil boring installation and sampling at 17 locations, including a boring at one previously assessed location.

Of the 61 soil boring locations across the three different assessments, 23 were on the levee surface and four were in the upland swale soil located to the east of the levee. There were 79 discrete soil samples and 12 duplicate samples collected from the levee soil and nine discrete samples and no duplicates collected from the upland swale soil. Samples were collected of the observed soil horizons at each location. These sampling locations and targeted depths were selected to assess the lateral and vertical distribution of PCB impacts in these areas. This IMWP is for the levee soil of Elliott Ditch; therefore, subsequent summary discussion will focus on these portions of the assessments only.

## 2.4 INVESTIGATIONS RESULTS SUMMARY

Subsurface geology of the man-made levee along Elliott Ditch was indicative of soils introduced through anthropogenic activity. Soils varied in distinct horizons below ground surface and showed evidence of the levee construction through lifts of fill material. For the assessed areas of the levee, a soil horizon of organic material and silty loam was typically present at 0.0 to 0.5 feet below grade. Under this horizon, the majority of soils consist of an aggregate of clay loam, silty clay, and clay with sand. Between 0.5 and 4.0 feet below grade, soils were typically reddish brown or brown to dark brown in color, moderately to very plastic with fine granular structure. Very plastic, black clay with sand was present at some locations along the levee at depths between 2.5 feet and 4.0 below grade. While most samples had gravel content less than 15-percent, isolated horizons less than 0.5 feet in thickness were identified containing greater than 60-percent gravel. This is indicative of the levee construction taking place in lifts and possibly including graveled access roads or varying amounts of aggregate in the fill material.

The highest concentrations of PCBs and widest extent of soil impacts were observed in the levee surface with concentrations greater than 50 mg/Kg being observed in five samples, one of which was a duplicate. PCB concentrations exceeding 10 mg/Kg were observed in 11 samples from the levee surface. The PCB impacts to the levee vary in depth across the anthropogenic feature; however, it appears to be limited to the upper three feet of material. The deepest soil sample with a concentration exceeding 1.0 mg/Kg was collected from 1.75 to 2.75 feet below grade at Milepost 00.17. Impacts exceeding the RBRO of 1.0 mg/Kg are observed from Milepost 0.00 to Milepost 0.41.

The results of the FSP support the application of a geomorphology based assessment. More specifically, the distribution of PCB impacts to the levee appear exclusively within surface and shallow soil. PCBs were not detected in the upland swale geomorphic surface, located immediately east of the levee and away from Elliott Ditch. The consistent lack of PCB detections outside of the levee bound the lateral extent of soil needing remediation. Additional detail regarding the results of the field sampling of Elliott Ditch can be found in the *Elliott Ditch Reaches 1-3 Field Sampling Report*, as prepared by CEC and August 2018 in Appendix III.

## 3.0 ELLIOTT DITCH LEVEE SOIL INTERIM MEASURES

### 3.1 INTRODUCTION

Arconic has unilaterally decided to remediate PCB impacted soil on the levee of Elliott Ditch and has prepared this IMWP to address the safe movement and disposal of these materials. The intent of the IMWP is to demonstrate that the proposed remedial approach will not pose an unreasonable risk to human health or the environment during the remedial actions or in the manner of disposal. As part of the RCRA Corrective Action process, this IMWP is being submitted to the IDEM and the USEPA Region 5 for review and coordinated approval. This IMWP is to address PCB impacts to soil on the levee situated in Reach 1 of Elliott Ditch. Subsequent efforts will be conducted to delineate and remediate, if necessary, other PCB impacted media within Reach 1 and the down gradient reaches of Elliott Ditch exceeding the RBRO of 1.0 mg/Kg.

### 3.2 OBJECTIVE

The IM objective of this project is to remove PCB impacted soil from the levee portion of Reach 1 of Elliott Ditch that contains concentrations exceeding the RBRO, as determined by the geomorphology-based assessments. The proposed excavation depths have been defined by the soil sampling analytical testing that has been performed to date and includes those where PCBs were detected above the RBRO. The horizontal extent of proposed excavation perpendicular to Elliott Ditch will be the full width of the levee and parallel to Elliott Ditch. PCBs were not detected in the upland swale geomorphic surface, located immediately east of the levee and away from Elliott Ditch. The consistent lack of PCB detections outside of the levee bound the lateral extent of soil needing remediation and support the geomorphology based assessment approach that is being used to guide this IM Project.

The RBRO for the levee soil at Elliott Ditch is total PCBs of 1.0 mg/Kg. The removed soil will be managed offsite at an Arconic-approved and appropriately permitted landfill. Specifically, soil exhibiting PCB concentrations greater than or equal to 50 mg/Kg will be disposed at a RCRA Subtitle C facility or TSCA landfill, as allowed by 40 CFR 761.61(a)(5). Soil exhibiting PCB concentrations less than 50 mg/Kg but greater than or equal to 1.0 mg/Kg will be disposed at a RCRA Subtitle D facility permitted to accept PCB-containing waste.

The limits of excavation for this IM Project of the levee soil at Elliott Ditch are illustrated on **Figure 2**. The final excavation footprint and depths are dependent upon the confirmation sample results.

### **3.3 REGULATIONS OR GUIDANCE TO SUPPORT INTERIM MEASURES APPROACH**

The USEPA exempts PCB waste from the RCRA waste requirements specified in 40 CFR Parts 261 through 265, parts 268, and 270. PCB wastes are instead regulated under TSCA. The exemption is described in 40 CFR Part 261.8, and includes the notification requirements specified in RCRA. The TSCA regulations governing the manufacturing, processing, distribution in commerce and use prohibitions, including remediation and disposal, are codified in 40 CFR Part 761. Additional TSCA regulatory guidance and criteria used to develop the IM approach is discussed in the following sections.

#### **3.3.1 Date of Release**

Arconic has performed a detailed review of historic operations at the Facility to determine the source and release date of the PCB impacts identified in Elliott Ditch. Provided in the following is a summary of the review results. Please note that Alcoa is used interchangeably with Arconic in this section of the IMWP.

To reduce the potential for a recurrence of an April 1955 petroleum oil fire at an Alcoa facility in Texas, Alcoa issued guidance to facility managers for the replacement of petroleum-based oils with non-flammable fluids. Recommended non-flammable fluids included Monsanto Pydraul-branded fluids known to contain PCBs. The Lafayette Operations (Facility) followed this guidance and changed some of its petroleum-based oils to Pydraul-branded fluids. In the late-1950s and 1960s, the Facility documented leaks of equipment containing non-flammable fluids including locations that flowed to the industrial storm sewer and to the sewage treatment plant.

As a response to a 1970 bulletin from Monsanto to consumers on the potential environmental effects of Pydraul-branded fluids, the Facility immediately began to discontinue use of these oils and implement policy to prevent discharge of the oils to the sewers. More specifically, in 1972, the Facility implemented a program to change several of the fire-resistant fluids from chlorinated biphenyl-based fluids to ester-based fluids. Later correspondence indicated that by 1974, all PCB-containing Pydraul had been eliminated from Facility reserves.

Starting in the summer of 1978, the Facility initiated an inventory, comprehensive testing, and fluid replacement program for all equipment previously containing or potentially contaminated by PCB-based fluids. In April 1979, the Alcoa Technical Center completed the first of two wastewater characterization studies identifying PCBs in the industrial sewer sediment, wastewater treatment plant sludge, and industrial influent.

In September 1979, the Facility notified the Stream Pollution Control Board of the presence of PCBs in confirmatory samples collected from the sewage treatment plant sludge. On December 7,

1979, the Indiana State Board of Health (ISBH) collected a sample from the Outfall 001 discharge, which according to the ISBH, “confirmed the presence of PCB in the discharge”. The confirmation is believed to be resultant from documented leaks of equipment containing non-flammable fluids including locations that flowed to the industrial storm sewer and to the sewage treatment plant.

In summary, based on the results of the record search for the Facility the following conclusions can be reached:

- Following a fire at an Alcoa facility in 1955, the Facility followed corporate guidance to change some of its petroleum-based oils to Pydraul-branded, and PCB-containing, fluids;
- In the 1970s, the Facility implemented a program to rid equipment of containing PCB-containing fluids and PCB-contaminated materials (primarily sludges, press waters, and oils). Stores of PCB-containing Pydraul non-flammable fluid were eliminated from Facility reserves by 1974;
- A release occurred prior to April 18, 1978. No spill from equipment with PCB-containing fluids, which resulted in a discharge to Elliott Ditch, was documented after this date;
- The source concentration is believed to be greater than 50 parts per million; and,
- Based on the facts presented above, any exceedance of the NPDES permit and/or discharge of impacted media to surface waters would be derived from pre-April 18, 1978, original release.

### **3.3.2 Clean Up Plan**

The following outlines the clean-up plan proposed to be completed under 40 CFR 761.61(c).

1. Clear underground utilities and remove overgrown brush, small trees, and other vegetation, as necessary, in support of preparing for the soil removal project.
2. Soil requiring excavation and offsite disposal due to detected PCB concentrations will be handled based on the concentration at which the PCBs are found, as outlined in 40 CFR 761.61.
3. Temporary storage of excavated, TSCA regulated soil is subject to the requirements of 40 CFR 761.65(c)(9). Temporary storage is permitted for a period of 180 days from the accumulation start date. Soil that is stockpiled within the excavation footprint for truck loading purposes will not be subject to these requirements so long as the stockpile is diminished by the end of the working day.
4. Soil containing less than the 1.0 mg/Kg total PCBs will be left in place. Once it is confirmed via sampling that the remediation of the levee soil has achieved the RBRO, the excavation will be backfilled with clean, borrow soil, and the levee will be restored to pre-project grades.

5. Soil containing greater than or equal to 1.0 mg/Kg and less than 50 mg/Kg PCBs will be excavated and disposed offsite at a RCRA Subtitle D facility, as outlined in 40 CFR 761.61(a)(5)(i)(B)(2)(ii) and §761.61(a)(5)(v)(A). Note that some RCRA Subtitle D facilities have a PCB concentration waste acceptance criteria slightly lower than 50 mg/Kg and no soil will be shipped to RCRA Subtitle D facility that have PCBs concentrations in excess of the facility waste acceptance criteria. The landfill(s) will be notified in writing of the amount and concentration of the waste at least 15 days prior to the first shipment, as outlined in §761.61(a)(5)(i)(B)(2)(iv).
6. Soil containing greater than or equal to 50 mg/Kg PCBs will be excavated and disposed offsite at a RCRA Subtitle C facility or TSCA landfill, as outlined in 40 CFR 761.61(a)(5)(i)(B)(2)(iii). If a RCRA Subtitle C facility is used for disposal, it will be notified in writing of the amount and concentration of the waste at least 15 days prior to the first shipment, as outlined in §761.61(a)(5)(i)(B)(2)(iv).
7. Material shipped off-site will be managed in accordance with the storage and disposal requirements defined in 40 CFR 761 Subpart D.
8. Waste disposal records and reports will be maintained for PCB remediation waste shipped off-site in accordance with 40 CFR 761 Subpart K.
9. Equipment used during the remediation project that potentially contacts impacted materials will be decontaminated following the standards and procedures described in 40 CFR 761.79.

### **3.4 CONSTRUCTION PLANS, PERMITS, AND NON-TSCA REGULATIONS**

There are other regulatory and legal requirements that are being considered other than TSCA. Provided in this section are those requirements identified as being applicable to this IM Project.

#### **3.4.1 Community Relations Plan**

The IM Project will include the preparation and implementation of a Community Relations Plan (CRP). The CRP will include at least the following content:

- Identify all property owners and property occupants that abut the properties that are subject to IM Project activities.
- Identify all known or registered neighborhood organizations serving the location of the IM Project, if any.
- Include a sample of a written notice to be sent to the property owners/property occupants and neighborhood organizations, which shall include:
  - a short description of the IM Project to be performed;

- information concerning the public comment period, including the time period and procedures for public comment, and the address to which comments are to be directed; and,
- the location of the record repository where the IMWP has been placed.
- Provide the name(s) and mailing address(es) of all affected local governmental units with jurisdiction within one mile of the property(ies) affected by the proposed IM Project. IDEM will notify the affected local government units about the IM Project and the anticipated remediation. In addition, local government units that are affected by the proposed IM Project will be notified by IDEM of the IMWP at the beginning of the public comment period as soon as an internal review of the document has been completed. These local government units will include those located in the county of the project only since no other counties are within one mile of the project.
- Provide the name(s) and mailing address(es) of at least two newspaper(s) or other appropriate circulars in which notice of the public comment period will be published.
- Identify the location of the public library and other public repositories in which a copy of the proposed IMWP will be placed. The proposed IMWP must be placed in the public library closest to the site and in the county affected by the project. If more than one repository is selected, the participant shall provide one additional copy of the proposed IMWP for each additional repository.
- In addition, a sign shall be posted that:
  - identifies the location as a IM Project site;
  - provides USEPA Region 5 project manager, IDEM OLQ project manager, and Arconic project manager phone numbers;
  - shall meet the following criteria:
    - be visible/readable from 20 feet;
    - be in English and the language predominantly used in the neighborhood if other than English;
    - place one sign per site access point and no more than three signs total; and,
  - shall be posted starting with the end of the public comment period for the IMWP, before any work begins and remain posted until the project has been completed.

The CRP will be prepared by Arconic and submitted for USEPA Region 5 and IDEM for review and approval. Once it has been approved, Arconic will implement the CRP in support of the successful execution of this IM Project.

### **3.4.2 Private Property Owner Access and Use Agreements**

This IM project is to take place on six private property parcels that have four different owners. *Access and Use Agreements* have been provided by each of the four owners and the agreements

include remediation and restoration as part of the permitted activities. That said, these private property owners will be engaged during planning for the IM Project to provide information regarding remediation and project logistics. If access to other private property(ies) with different ownership is required to support access to the levee or other project functions, the *Access and Use Agreement* used during implementation of the FSP will be used to document approval.

### **3.4.3 Tippecanoe County Drainage Board Coordination**

The Tippecanoe County Drainage Board has regulatory authority over easements associated with regulated drains. As noted previously, the easement for the regulated portion of Elliott Ditch extends 75 feet from the top of both banks. The majority of this IM Project will take place within this easement and coordination with the Tippecanoe County Drainage Board will be required. It is understood that Tippecanoe County Surveyor's Office is the ex-officio, non-voting, member of the Drainage Board. This provides the County Surveyor with authority over construction, reconstruction, and maintenance of all regulated drains and proposed regulated drains within the county. It is understood that the Drainage Board meets on the 1<sup>st</sup> Wednesday of every month at 10 a.m. If needed, this meeting time can be used to engage the Drainage Board to discuss the project and outline the information that will be needed for review such that approval of the IM Project can be provided. Ultimately, approval of the IM Project, including removal and restoration of portions of the levee, will be required from the Tippecanoe County Drainage Board.

### **3.4.4 Erosion and Sedimentation Control**

The area of disturbance associated with the IM Project will exceed the 1.0-acre threshold for requiring an Erosion and Sediment Control Plan and coverage under the NPDES General Permit Rule Program. Therefore, an Erosion and Sediment Control Plan will be implemented in accordance with applicable Indiana Administrative Code (IAC) requirements, specifically outlined in 327 IAC 15-5 (Rule 5) "Stormwater Run-off Associated with Construction Activity", and local regulations. It is assumed that the process will include submitting an Erosion and Sediment Control Plan to the City of Lafayette (City) for review, since it is its own Municipal Separate Storm Sewer System (MS4). Once the City has reviewed and approved the plan, a Notice of Intent (NOI) will then be filed with the City. A City Inspector will periodically visit the project to review and assess the adequacy of in-place erosion and sedimentation control measures. Sediment control devices will be installed before or concurrently with initial clearing and grubbing, and prior to land disturbing activities. Removal of the devices will not occur until the construction site is stabilized. The Erosion and Sedimentation Control Plan, NOI, and approval letter from the City will be provided to the USEPA Region 5 and the IDEM, upon request, for informational purposes.

### **3.4.5 Utility Clearance**

Prior to earthwork activities, it is required by law to contact the public underground utility locating service. In the State of Indiana, that service is Indiana811. Contact to Indiana811 will occur at

least 2-weeks in advance of ground-breaking activities. In addition to the required Indiana811 notification, information regarding the IM Project will also be provided to the local utility companies. If it becomes necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction, the appropriate service provider will be contacted to discuss the process necessary to relocate the utility.

### **3.5 INTERIM MEASURES – REMEDIAL APPROACH**

The remediation process will include the removal of PCB impacted soil from the levee that exceeds the RBRO. The excavation extents will be based on the geomorphic principals used in the assessment of this reach of Elliott Ditch and the soil sampling analytical results that confirm the use of this approach. Please refer to **Figure 2** for the proposed excavation extents of the levee. The following outlined steps describe the conceptual approach to the IM Project.

1. Mobilization – Transport materials, equipment, and personnel to the site.
2. Benchmarks – Field benchmarks will be established by the Owner/Engineer and maintained during construction. A minimum of four permanent benchmarks will be established by a State of Indiana Professional Land Surveyor and used for delineating the excavation extent and establishing machine control (if necessary).
  - a. Benchmark locations will be recorded with horizontal and vertical data on Project Record Documents. The datum used will be a known coordinate system, such as Indiana State Plane. The use of a local coordinate system will not occur.
  - b. Where the actual location or elevation of layout points cannot be marked, temporary reference points will be provided as necessary to locate the extents of the IM Project.
  - c. Temporary reference points will be removed when no longer needed.
3. Project Stakeout – Prior to starting construction, improvement features will be field located, including: construction entrance(s), access road(s), erosion and sedimentation controls, project support area(s), and excavation footprints.
4. Site preparation – Furnish and install silt fence, stabilized construction entrance, access road(s), heavy equipment decontamination area and other sedimentation control devices as applicable.
5. Clearing, grubbing, and disposal of vegetative waste – Trees, shrubs, and plants will be designated for removal using boundary markers or spray paint. Vegetation within the remedial footprint will be cut off approximately 2 inches above the ground surface and the stump and roots removed during excavation of PCB impacted soil. Grubbed materials (vegetative material only) from below surface grades that are in contact with PCB impacted

material will be transported offsite for disposal along with the soil removed from the area. Cleared materials from above surface grades will either be chipped and used onsite or transported offsite for disposal at a RCRA Subtitle D (non-hazardous, municipal solid waste) facility.

6. Removal of targeted materials – The excavation plans will be used to direct remediation. The excavation process will be conducted to efficiently handle removed materials; for example, excavated materials may be direct loaded into lined trucks instead of stockpiling. In general, these materials will be managed as follows:
  - a. Soil containing greater than or equal to 1.0 mg/Kg and less than 50 mg/Kg total PCBs will be excavated, loaded, and hauled off-site to an approved RCRA Subtitle D landfill.
  - b. Soil containing greater than or equal to 50 mg/Kg total PCBs will be excavated, loaded, and hauled off-site to an approved RCRA Subtitle C or TSCA landfill.
7. Precipitation accumulation management – Rain water that collects within the open excavation footprint and is in contact with soil potentially containing PCBs will be treated the same as the decontamination wastewater as discussed in Section 3.5.
8. Excavation equipment management – To the extent practical, equipment will remain either within or outside of the disturbed excavation footprint during the IM Project. This will protect against mobilizing potentially impacted materials into other areas along the ditch. Haul trucks will remain out of the excavation footprint or on clean materials placed within to protect against mobilizing impacted materials.
9. Confirmation sample collection – Confirmation samples will be collected from the bottom of the excavation to confirm the removal of materials containing total PCBs greater than or equal to 1.0 mg/Kg. See Post Excavation Confirmation Sampling, Section 3.7, for additional detail.
10. Borrow soil specification and confirmation sample collection – An offsite borrow source(s) will be needed to backfill and compact the excavations. Borrow soil will be subject to the following requirements:
  - a. Consist of clean, well-graded, natural soil classified as SW, SM, SM-SC, SC, ML, CL-ML, or CL (ASTM D 2488) containing no topsoil or other deleterious material.
  - b. Stones or rock fragments will not exceed one quarter the maximum lift thickness (9-inches) as compacted in any dimension. Isolated rocks will be a maximum of 6-inches in any dimension and removed if observed.
  - c. Fill materials will have a 10-percent maximum loss on ignition (ASTM D 2974).

The levee will need to be restored to at least pre-project conditions to prevent flooding on properties it was constructed to protect. The vendor(s) of the offsite source will provide certification statements or documentation (i.e. analytical testing reports) indicating the soil is free of contamination. If no certification statement is provided or the source of the borrow material is suspect, environmental samples will be collected to confirm it is free of contamination prior to use. Additionally, geotechnical samples will be collected to establish the Standard Proctor curve for the material if it is not provided by the vendor.

11. Retrieve borrow soil from the offsite source(s) – Borrow soil will be excavated and placed into dump trucks and transported to Elliott Ditch for use in backfilling the excavation. It is assumed that reconstructing the levee will occur immediately following excavation and confirmation that the decision unit meets the RBRO. The fill material will be directly dumped into the excavation footprint or temporarily stockpiled. If temporary stockpiles for the borrow material are created, erosion and sedimentation controls will be installed as necessary.
12. Place, grade, and compact the backfill soil – Soil backfill materials are to be placed in loose lifts not to exceed 9 inches in depth for material compaction by heavy equipment. Placement will occur in a manner such that equipment is not in direct contact to the completed excavation bottom. Backfill materials are to be compacted to not less than 95-percent of maximum dry unit weight according to ASTM D-698 (Standard Proctor Test) using mechanical equipment. Compacted fill will be placed to at least pre-project elevations such that the levee is fully restored.
13. Backfill equipment management – Equipment will take special precautions to not track PCB impacted soil across clean areas. If equipment is suspected of coming into contact with impacted materials, it will be properly decontaminated, as discussed in Section 3.5, prior to mobilization into clean areas.
14. Removal of access road(s), sump(s), and temporary stockpile areas – Any project support features, i.e. sump(s), temporary stockpile areas, etc. will be removed, unless specifically requested to be left in place by the Tippecanoe County Drainage Board or the private property(ies) owner, or identified as being needed for subsequent remedial efforts, after successful execution of the IM Project.
15. Post excavation and post backfill topographic surveys – Periodic topographic surveys will be conducted after successful excavation of PCB impacted soil to the RBRO. The surveys will collect information regarding the depth and extent of the completed excavation and be used to estimate the volume of material removed during the IM Project. The periodic surveys will be conducted by onsite staff trained to use survey-grade GPS equipment. A State of Indiana Professional Land Surveyor will perform the post backfill topographic

survey to document completed conditions meet or exceed pre-project conditions and record it in a known coordinate system, such as Indiana State Plane, and elevation datum.

16. Vegetative planting – Areas disturbed by the IM Project will receive at least a single, loose 3-inch lift of topsoil and be subject to vegetative planting. The topsoil will be pH of 5.5 to 7.0 and contain a minimum of 6-percent organic matter and no stones larger than 1-inch in any dimension. Phosphorus free fertilizer (12 – 0 – 12) will be applied at a rate of 23 pounds per 1,000 square feet to assist in germination and growth. The selected seed mixture and application rate will be determined based on the completion date of the project and soil conditions. Erosion and sedimentation controls will not be removed until adequate vegetative coverage has been established and the Notice of Termination for the NPDES General Permit has been submitted.

### **3.6 DECONTAMINATION OF HEAVY EQUIPMENT**

Decontamination areas will be constructed and maintained at the equipment exits for remedial footprint. The locations for these areas will be selected by the contractor and approved by Arconic. Clean gravel will cover the areas to prevent potential recontamination of vehicles after being decontaminated. The decontamination area will be lined with construction-grade plastic to prevent infiltration of fluids into the subsurface and sloped to drain to a collection sump, preferable away from Elliott Ditch. Dry soil removal from heavy equipment will occur by using disposable brushes, trowels, and hand tools. Removed dry soil will be returned to the soil staging area or live loaded for offsite management. The remaining soil removal from heavy equipment will be in accordance with 40 CFR 761.79 *Decontamination Standards and Procedures*. The process is likely to include using a pressure washer followed by cleaning with environmentally friendly detergent/water, rinsing with potable water, and wiping down equipment areas that were in contact with impacted soil with a solvent (e.g. hexane, acetone, diesel fuel, or others). Management of decontamination fluids, including spent solvents, will be in 55-gallon drums or tanks that will be stored in a secure area for characterization sampling and analytical testing purposes. Management of these materials will be according to the analytical results.

Residual sediment present in the pressure washer run-off will collect in a sump. Once the sediment accumulation in the sump is at least half of the sump depth, it will be sampled and analyzed for PCBs. Excavation and offsite management of the sediments will be per the PCB analytical results. Sediment containing greater than or equal to 50 mg/Kg PCBs will be removed and disposed of offsite at a RCRA Subtitle C facility or TSCA landfill. Sediment containing concentrations of PCBs less than 50 mg/Kg will be removed and disposed of offsite at a RCRA Subtitle D facility.

Sediment to be hauled offsite for disposal must first pass the “paint filter test”. If necessary, the sediment will be amended with bulking agents such as sawdust, so long as the selected disposal

facility approves the use. Amendments, such as lime, that can cause an exothermic reaction that raises the temperature of the sediment, are not planned for use.

Wastewater from the decontamination process will also collect in the sump. Sampling of the wastewater may occur to establish PCB concentrations prior to treatment. This information will help estimate the treatment system operations, such as the flow rate and contact time. Removal of the wastewater will be by pump to an adjacent treatment system consisting of storage tanks, bag/cartridge filter units, and carbon filter units. The storage tanks and treatment system will be within secondary containment. Pumping will occur at a frequency necessary such that the sump does not overflow and at a flow rate for adequate contact time with the carbon filter media to achieve the necessary removal efficiency.

The wastewater will be pumped into a storage tank after it has passed through the carbon filtration process. Once the storage tank is full with filtered wastewater, the collection of a treated wastewater sample will occur for PCB analytical testing. The wastewater will be reused for decontamination purposes if the PCB analytical result is less than 0.5 ug/L threshold required for reuse, in accordance with 40 CFR 761.79(b)(1)(iii). At the end of the project, the containerized water will be transported to a licensed and permitted facility for treatment and disposal.

### **3.7 WASTE MANAGEMENT**

#### **3.7.1 Liquid Waste**

Management of the wastewater generated during the decontamination of heavy equipment will be handled as described previously. The amount of reused water, sampling analytical results, and volume transported offsite for treatment and disposal will be identified in the Post Construction Report.

#### **3.7.2 Solid Waste**

The proposed IM project includes the excavation and offsite disposal of impacted material with PCB concentrations greater than or equal to 1.0 mg/Kg. Based on the soil sampling conducted to-date, the estimated mass of soil that is expected to be removed is approximately 5,680 tons. Of the 5,680 tons, an estimated 760 tons have been identified as having PCBs greater than or equal to 50 mg/Kg and will be disposed of at a RCRA Subtitle C or TSCA landfill. The remaining approximately 4,920 tons contain total PCBs concentrations less than 50 mg/Kg and will be disposed of at a RCRA Subtitle D facility. Following removal of this material, confirmation samples will be collected for laboratory analysis of PCBs, as described in Section 3.7. If confirmation sampling identifies remaining material containing greater than or equal to 50 mg/Kg PCBs, this material will excavated and disposed of at a RCRA Subtitle C facility or TSCA landfill. If remaining soil contains PCBs exceeding the respective RBRO, but are less than 50 mg/Kg PCBs,

this material will be excavated and disposed at a RCRA Subtitle D facility. Excavation will continue until confirmation sampling demonstrates successful remediation of each decision unit.

The management of solid waste includes the management of sediment that has accumulated in the heavy equipment decontamination pad run-off collection sump (as described in Section 3.5 above), as well as any used filters, spent carbon, and sediment that has been generated from the wastewater treatment process.

During the implementation of this IM Project, Arconic will work with the disposal facilities to profile each waste stream such that it complies with the permits for the respective disposal facility prior to transportation. The mode of transportation will be by rail car or lined and covered truck. Also, Arconic will comply with applicable USEPA and Department of Transportation (DOT) regulations for either transportation method. In support of this IM Project, Arconic has identified the following potential disposal facilities. Other disposal facilities will be considered so long as it is Arconic approved and permitted to accept the identified waste streams. If RCRA Subtitle C or D facilities are used for PCB waste disposal, notification to the facility will be made at least 15 days prior to the date of the first shipment of material.

#### 3.7.2.1 Potential RCRA Subtitle D Facilities

Soil containing greater than or equal to 1.0 mg/Kg and less than 50 mg/Kg PCBs can be sent to:

- Waste Management – Liberty Landfill (White County, Indiana)
- Waste Management – Oak Ridge Recycling and Disposal (Cass County, Indiana)
- Republic – Clinton County Landfill (Clinton County, Indiana)

#### 3.7.2.2 Potential RCRA Subtitle C Facilities

Soil containing greater than 50 mg/Kg PCBs can be sent to:

- Heritage – Heritage Landfill (Roachdale, Indiana)
- US Ecology – US Ecology Alabama (Sulligent, Alabama)
- Clean Harbors – Lone Mountain Landfill (Waynoka, Oklahoma)

#### 3.7.2.3 Potential TSCA Landfills

Soil containing greater than 50 mg/Kg PCBs can be sent to:

- US Ecology – US Ecology Michigan (Belleville, Michigan)
- Clean Harbors – Grassy Mountain Landfill (Grantsville, Utah)
- Chemical Waste Management – Hazardous Waste Facility (Emelle, Alabama)

Upon selection of the appropriate disposal facilities, Arconic will conduct additional sampling, if necessary, to complete profile development for the solid waste stream.

### 3.8 POST EXCAVATION CONFIRMATION SAMPLING

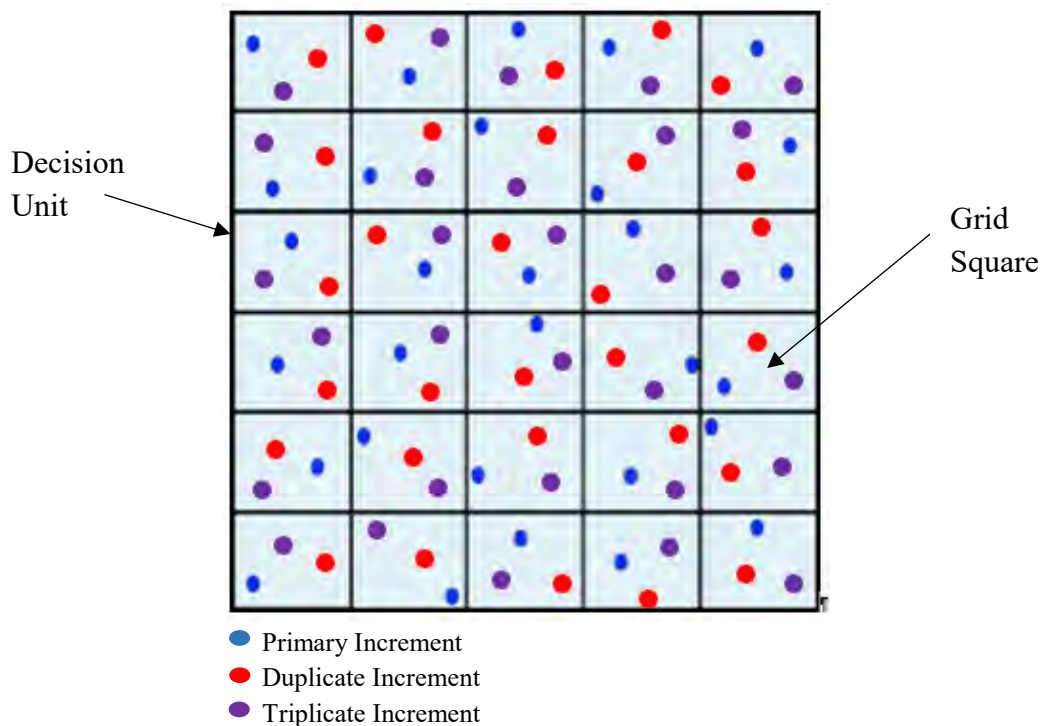

Confirmation sampling will occur from within the remedial excavation areas to document the successful excavation of PCB impacted soils containing concentrations greater than or equal to 1.0 mg/Kg. Confirmation sampling will be conducted in accordance with the Interstate Technology Regulatory Council (ITRC) document *Incremental Sampling Methodology* (ISM) dated February 2012. Incremental sampling utilizes a normalized composite sampling and processing approach to reduce variability. The use of ISM in this confirmation sampling application, including how the increments will be processed, will provide a slightly enriched representation (overestimate) of the constituent concentration in the sampled material over the assessed area by biasing the analyzed portion of the increment to the finer soil grain sizes. PCBs tend to more readily absorb to these size particles. This approach leads to more consistent, conservative, and reproducible results that are more representative and protective of human health and the environment. Use of this sampling approach is appropriate given the exposure pathways that exist on and around the levee. The results will be more representative of potential future exposure than a discrete or small, composite sampling approach.

For this IM Project, there will be eleven excavation areas designated Decision Units (DUs) 1 through 11 (**Figure 2**). The DUs are subject to the same decision criteria, which is the RBRO of 1.0 mg/Kg. Each DU is less than or equal to a quarter of an acre and was selected to coincide with the varying proposed excavation depths. Confirmation sampling at DUs 1 through 11 will be conducted following the ISM. To determine the number of composite points, or increments, per DU, the coefficient of variation (CV) was calculated using the data in Table 1. The CV was calculated as 1.39; therefore, per the ISM, 20-31 increments and  $\geq 3$  replicates (i.e., primary, duplicate, and triplicate samples) are required for each DU. The sampling method within each decision unit will be random sampling within grids, where the number of grid squares is equal to the number of increments. Each grid will be approximately the same square footage, but not necessarily the same shape due to the irregularities of the levee footprint. The sample, duplicate, and triplicate sample increments will be collected from within a grid location at random while maintaining at least 3 feet of separation from one another. Please refer to **Figures 3** through **5** that depicts the grids within each DU and the illustration on the following depicting the layout of the primary, duplicate, and triplicate increments.

The perimeter of the grids making up each DU will be located and marked using a real-time kinetic (RTK) GPS unit or similar. Increments will be collected using a 1-inch diameter barrel sampler, or similar, advanced to 3 inches below the bottom of the excavation with a slide hammer, such that the recovered increment volume is consistent between locations. Should refusal be encountered without reaching 3 inches in depth, the increment location will be offset and sample collection retried. This procedure will be followed until adequate soil recovery is retrieved in the sampler. The soil from the individual increments obtained from each of the grids will be placed into laboratory provided glassware and appropriately labeled while wearing nitrile gloves. Processing

of the individual increments and compositing into the incremental sample will be performed by the laboratory following the procedure described in Section 3.9. Each DU will include primary, duplicate, and triplicate incremental samples, i.e. three unique samples made up of different increments from each of the grids. Based on an estimated density of the levee soil between 1.0-1.1 grams per cubic centimeter ( $\text{g}/\text{cm}^2$ ), individual soil increments will weigh approximately 40-45 grams, with the final incremental samples weighing approximately 800-1,400 grams. Upon collection, the increments will be placed into laboratory provided containers, labelled, and stored in a cooler on ice for shipment to the laboratory under proper chain-of-custody control. Increment processing in support of preparing the incremental sample is as described in Section 3.9. An example illustration of the random sampling within grids approach is provided in the following.

**Example Illustration – Primary, Duplicate, & Triplicate Incremental Samples  
Increment Collection Locations in Grids Using Random Sampling Approach**

Reusable sampling equipment will be grossly decontaminated between each increment by removing solids and rinsing with distilled water. The sampling equipment will also be decontaminated using brushes, Alconox and distilled water mixture, and rinsed with clean distilled water upon collection of the final increment of an incremental sample. Decontamination solids and fluids will be containerized in matrix specific, 55-gallon drums near the ditch. Management of these materials will be based on the analytical testing results.

The criteria to demonstrate that a DU has achieved the remedial objective will be a comparison of the highest incremental sample (primary, duplicate, or triplicate) result to the RBRO of 1.0 mg/Kg

total PCBs. If 1.0 mg/Kg is exceeded, at least an additional 6 inches of material will be excavated from the DU and hauled offsite for disposal. The DU will then be subjected to the confirmation sampling procedure a second time, i.e. all three incremental samples will be collected again. The process will continue until each of the three incremental samples from the same depth interval achieves the remedial objective.

### **3.9 SAMPLE PROCESSING AND ANALYSIS**

The collected increments will be processed in the analytical testing laboratory to prepare the primary, duplicate, and triplicate incremental samples. The processing procedure for compositing the increments into an incremental sample are provided in the following:

1. Initial sample screening – The increments will be subjected to the removal of rocks, vegetative debris (roots, sticks, leaves, etc.), and water decanted prior to processing.
2. Sample conditioning – The increments will be oven dried at 103 degrees Celsius (°C), or an acceptable alternate temperature, to remove residual moisture. No percent moisture analysis will be performed since water will be removed from the increments during this step and prior to analytical testing for PCBs.
3. Particle size reduction and selection – The increments will be subjected to particle size reduction using grinding, mortar/pestle, dish and puck, pulverizer, or another approved technique. The increment will then be passed through the #60 sieve [250 micrometer (µm)]. Material that does not pass will be subjected to further particle size reduction and again attempted to pass through the #60 sieve. This process will continue until as much of the increment can be passed through the sieve as practicable. The retained volume will be used for subsequent processing.
4. Sample mixing – Each of the increments will then be mixed by tumbling in a container with adequate headspace. This will homogenize the increments prior to splitting and subsampling.
5. Splitting and subsampling – The increments will then be split, including compositing, using a riffle splitter or 2-dimensional slab cake. A subsample will then be selected after splitting and subjected to further splitting and the process repeated until approximately 30 grams of the incremental sample remains, at which point it will be subjected to analytical testing.

PCBs are the COCs for Elliott Ditch and the levee soil. Therefore, the laboratory analysis of the incremental soil samples will be for PCBs by USEPA Method 8082, following sample preparation Method 3540/3541 Soxhlet extraction. Under current USEPA and IDEM guidelines, a trip blank is only appropriate for aqueous VOC samples. Aqueous VOC samples will not occur as part of the IM Project, thus trip blanks are not appropriate. Soil samples are typically heterogeneous and

field duplicate soil samples frequently do not have good reproducibility due to that heterogeneity. Use of the incremental sampling approach and the associated laboratory processing (drying and sieving) results should provide more reproducible results than discrete or field compositing sampling techniques. Therefore, field duplicates will occur at a rate of one per every 20 incremental samples to assess the level of heterogeneity present in the soil. Should a duplicate sample indicate an exceedance of the RBRO, where the original sample did not, the DU will be subjected to additional excavation and resampling, as discussed previously. Due to the consistent nature of the soil present on the levee, one matrix spike/matrix spike duplicate (MS/MSD) sample for every 20 incremental samples will also be collected to assess for matrix interferences. Additionally, aqueous equipment blank sample(s) will be collected periodically by running distilled water over decontaminated sampling equipment and collecting the water in laboratory provided containers. These blank samples will be subjected to laboratory analysis for PCBs by USEPA Method 8082 and the results reviewed to assess the potential for cross-contamination.

### **3.10 POST CONSTRUCTION REPORT**

A Post Construction Report will be developed and submitted to the IDEM and the USEPA Region 5 within 120 days after completion of the IM Project and successful closeout of any associated permits. The following activities will be documented in the Post Construction Report.

1. Summary of IM activities, including:
  - a. Discussion of IM Project sequencing.
  - b. Types (TSCA and non-TSCA) and volumes of materials removed – volumes will be included showing the type and number of tons hauled off-site disposal.
  - c. Method of solid and liquid waste management including discussion regarding the processes and copies of disposal documents (weight tickets, manifests, and certificates of disposal).
  - d. Post excavation confirmation sampling locations, results, and analytical reports.
  - e. Photos documenting completion of the IM Project according to the IMWP.
2. Copies of the Erosion and Sedimentation Control Plan, NOI, approval letter from the City, and the Notice of Termination (NOT). If the disturbed areas have not achieved the required vegetative coverage for NPDES Permit closure and the Post Construction Report has been prepared, it will be submitted without the NOT. The NOT will be provided upon filing.
3. Final engineering as-built drawing showing: the completed excavation extents and grades, as well as the completed backfill grades. The as-built drawing(s) will be prepared in AutoCAD and labelled to include: the project name, date, owner's name, name of the engineer, surveyors signed seal, name of the construction manager, and the contractor.
4. Engineer certification statement.

1. EXISTING CONDITIONS TOPOGRAPHY GENERATED FROM DATA PROVIDED BY INDIANA'S STATEWIDE IMAGERY AND LIDAR PROGRAM AND AVAILABLE AT WWW.OPENTOPO.SDSC.EDU. AIRBORNE LIDAR SURVEY PERFORMED BETWEEN 3/13/2011 AND 4/30/2012.
2. INFORMATION FOR EXISTING STORM, SANITARY, AND WATER UTILITIES IN THE VICINITY OF THE PROJECT WERE PROVIDED TO CEC BY BUTLER, FAIRMAN, AND SEUFERT, INC. FROM THE CITY OF LAFAYETTE GIS. DATA PROVIDED ON 5/23/2019.

**NOTES**

1. CONFIRMATION SAMPLING WILL BE CONDUCTED IN ACCORDANCE WITH THE INTERSTATE TECHNOLOGY REGULATORY COUNCIL (ITRC) INCREMENTAL SAMPLING METHODOLOGY (ISM) DOCUMENT AND THE SPECIFIC PROTOCOLS OUTLINED IN THE REVISED INTERIM MEASURES WORKPLAN (MWP) DATED NOVEMBER 2019.
2. THE LIMITS OF SOIL EXCAVATION AND REMOVAL HAVE BEEN DIVIDED INTO 11 DECISION UNITS THAT ARE LESS THAN A QUARTER OF AN ACRE EACH. DECISION UNIT BOUNDARIES ARE SELECTED TO COINCIDE WITH THE VARYING EXCAVATION DEPTHS.
3. DECISION UNITS AREA DESIGNED TO EACH CONTAIN 20 TO 31 APPROXIMATELY EQUALLY SIZED GRIDS. THE SAMPLING METHOD WITHIN EACH DECISION UNIT WILL BE RANDOM SAMPLING WITHIN THE GRIDS, WHERE THE NUMBER OF GRID SQUARES IS EQUAL TO THE NUMBER OF INCREMENTS (I.E. ONE SAMPLE INCREMENT WILL BE COLLECTED FROM EACH GRID SQUARE. EACH INCREMENT WILL BE COLLECTED FROM THE TOP 6 INCHES OF SOIL.
4. A PRIMARY, DUPLICATE, AND TRIPPLICATE SAMPLE WILL BE COLLECTED FROM EACH OF THE DECISION UNITS FOLLOWING THE RANDOM SAMPLING WITHIN GRIDS METHOD. THE PRIMARY, DUPLICATE, AND TRIPPLICATE LOCATIONS WITHIN A GRID WILL BE AT LEAST 3 FEET FROM EACH OTHER. REFER TO SECTION 3.7 OF THE MWP FOR ADDITIONAL DETAIL.
5. THE CRITERIA TO DEMONSTRATE THAT A DECISION UNIT HAS ACHIEVED THE REMEDIAL OBJECTIVE WILL BE A COMPARISON OF THE HIGHEST ISM SAMPLE RESULT (PRIMARY, DUPLICATE, OR TRIPPLICATE) TO 1.0 MG/KG TOTAL PCBs. IF 1.0 MG/KG IS EXCEEDED, AT LEAST AN ADDITIONAL 6 INCHES OF MATERIAL WILL BE EXCAVATED FROM THE DECISION UNIT FOR OFFSITE DISPOSAL. THE DECISION UNIT WILL THEN BE SUBJECT TO THE CONFIRMATION SAMPLING PROCEDURE A SECOND TIME (I.E. PRIMARY, DUPLICATE, AND TRIPPLICATE SAMPLES WILL BE COLLECTED AGAIN). THE PROCESS WILL CONTINUE UNTIL EACH OF THE THREE ISM SAMPLES FROM THE SAME DEPTH MEET THE REMEDIAL OBJECTIVE.

Mr. Robert Prezbindowski  
Arconic, Incorporated  
2300 North Wright Road  
Alcoa, Tennessee 37701

Re: EPA TSCA Coordinated Approval for the Remediation of the Elliott Ditch Levee Soil Portion of Solid Waste Management Unit (SWMU) 50  
Outfall 001/Elliott Ditch/Wea Creek  
Arconic Lafayette Operations Facility, 3131 East Main Street, Lafayette, Indiana  
EPA ID: IND005478094

Dear Mr. Prezbindowski:

This letter is in response to the January 8, 2020 request submitted by Arconic Incorporated (Arconic) to the U.S. Environmental Protection Agency, Region 5 (EPA) for a Coordinated Approval, under the Toxic Substances Control Act (TSCA), 15 U.S.C. § 2601 *et seq.*, for the Remediation of Polychlorinated Biphenyls (PCBs) at the Elliott Ditch Levee Soil Portion of Solid Waste Management Unit (SWMU) 50 - Outfall 001/ Elliott Ditch/Wea Creek, adjacent to the Arconic's Lafayette Operations Facility, located at 3131 East Main Street, Lafayette, Indiana.

Your request for a TSCA Coordinated Approval is based on the January 7, 2020 Indiana Department of Environmental Management (IDEM) approval of Arconic's November 2019 Revised Resource Conservation and Recovery Act (RCRA) Interim Measures Work Plan (IMWP) for the remediation of PCB contaminated soils found at the Elliott Ditch Levee.

Under 40 Code of Federal Regulations (CFR) § 761.77(c), EPA may issue a Coordinated Approval under TSCA if the EPA Regional Administrator determines that the activity (1) will not pose an unreasonable risk of injury to health or the environment, and (2) is being conducted pursuant to a State-issued decision document which exercises control over the management of PCB wastes under a State program that has been approved by EPA and is no less stringent in protection of health or the environment than 40 CFR Part 761. The remediation of the Elliott Ditch Levee soil is being performed under the direction of the IDEM Office of Land Quality pursuant to the requirements of RCRA corrective action being administered at Arconic's facility. IDEM is the lead agency responsible for oversight of RCRA corrective action obligations at the Arconic facility under Indiana's authority as a state authorized to implement RCRA.

Geomorphic surface mapping conducted in 2013 and 2014, as documented in the July 6, 2015 Elliott Ditch Geomorphic Surface Mapping and Historic Data Review, identified eight distinct

reaches or erosional/depositional regimes. The levee soil is situated on the eastern bank of Elliott Ditch from near Outfall 001 (Milepost 0.00) to approximately Milepost 0.50, within Reach 1. The Risk Based Remedial Objective (RBRO) for this project is one part per million (PPM) PCBs and forms the basis for the remediation of the PCB contaminated levee soil.

Based upon the information presented in Arconic's IMWP for the remediation of the Elliott Ditch levee soil and IDEM's approval of the IMWP, EPA finds that the excavation and off-site disposal of PCB remediation waste conducted in accordance with the IMWP, will not present an unreasonable risk of injury to health or the environment. Accordingly, Arconic's January 8, 2020 request for a Coordinated Approval for the subject PCB remediation activities is granted in accordance with the PCB regulations at 40 CFR § 761.77.

You must notify the RCRA Subtitle C and Subtitle D disposal facilities in writing of the amount and concentration of the PCB contaminated soil at least fifteen (15) days prior to the first shipment of the waste (40 CFR § 761.61(a)(5)(i)(B)(2)(iv)). You must notify EPA in writing within five (5) calendar days of any changes relating to PCB waste management requirements in the approved work plan, in accordance with 40 CFR § 761.77(a)(3). Under this Coordinated Approval and 40 CFR § 761.77(c), you must comply with the terms and conditions of the IDEM-issued enforcement document, as well as the reporting and recordkeeping requirements in 40 CFR Part 761, Subparts J and K. Lastly, this Approval requires that a copy of the Elliott Ditch Levee Soil Interim Measures remediation completion report be submitted to EPA in addition to its submittal to IDEM.

This letter does not relieve Arconic from compliance with any other federal, state or local regulation and does not preclude EPA from initiating any enforcement action, including an action seeking civil penalties for any violation of federal regulations. If you have any further questions regarding this matter, please feel free to contact Jean Greensley of my staff at (312) 353-1171 or greensley.jean@epa.gov.

Sincerely,

Edward Nam  
Director  
Land, Chemicals and Redevelopment Division

Mr. Robert Prezbindowski  
Senior Remediation Project Manager  
Arconic, Inc.  
Tennessee Operations  
2300 North Wright Road  
Alcoa, Tennessee 37701-2516

Dear Mr. Prezbindowski:

RE: RCRA Corrective Action  
Interim Measures Work Plan  
Elliott Ditch – Levee Soil Remediation  
Revised November 2019  
Arconic Lafayette Operations  
Lafayette, Tippecanoe County  
EPA ID No. IND005478094

The Indiana Department of Environmental Management (IDEM) reviewed the above-referenced work plan (VFC # 82863525), submitted on your behalf by Civil & Environmental Consultants, Inc. on November 14, 2019, that describes the remediation of polychlorinated biphenyl (PCB) contamination found in the Elliott Ditch levee. This work plan is a revision to one previously submitted and conditionally approved by IDEM on August 8, 2019 (VFC # 82822428). The conditional approval required U.S. EPA's acceptance of the post-excavation sampling scheme; the revised work plan now meets that requirement. All other comments made on the original work plan remain valid and are reproduced here.

The work plan relies on the geomorphic surface mapping done in 2013 and 2014, as documented in the Elliott Ditch Geomorphic Surface Mapping and Historic Data Review, dated July 6, 2015 (VFC # 80110943) and the results of the Field Sampling Plan, as summarized in the Elliott Ditch Reaches 1-3 Field Sampling Report, dated August 2018 (VFC # 82815864).

IDEM approves the work plan, with the following comments:

- As stated in the work plan, the risk-based remedial objective (RBRO) for this project is 1 mg/Kg PCB. This RBRO was chosen to be protective of human health and to reduce the exposure of ecological receptors to PCB contamination. While both the U.S. Environmental Protection Agency (U.S. EPA) and IDEM support the use of the 1 mg/Kg PCB RBRO, a cleanup to this level may not be sufficient to return the affected surface water bodies to unlimited use, particularly in regard to fish consumption.

Mr. Robert Prezbindowski  
Page Two

- The work plan allows for the temporary storage of excavated soil within the footprint of the excavation. Any soil stockpiled in this manner must be properly managed so as to prevent run-on and run-off of water.
- For soil removal and confirmation sampling purposes, the lateral and vertical extent of affected soil extends from the location that exceeds 1 mg/Kg PCB to the location where the concentration is  $\leq$  1 mg/Kg PCB.
- The higher result between a sample and its duplicate will be used to determine if additional soil removal is necessary.
- The Community Relations Plan should also include precautions to be taken to prevent exposure to the excavated soil and excavation equipment during these Interim Measures activities.
- Arconic will provide U.S. EPA Region 5 and IDEM copies of the Erosion and Sedimentation Control Plan, Notice of Intent, and the approval letter from the City of Lafayette. These copies are for informational purposes only.
- Arconic will provide U.S. EPA Region 5 and IDEM results of the analytical testing of borrow soil, ensuring an adequate frequency of samples are analyzed to substantiate all borrow soil is  $\leq$  1 mg/Kg PCB.

IDEM understands this approval will be used in Arconic's request for a TSCA Coordinated Approval from U.S. EPA Region 5. If you have any questions, please contact me at (317) 232-3409 or [dstilz@idem.IN.gov](mailto:dstilz@idem.IN.gov).

Re: Arconic Elliott Ditch – Levee Soil Remediation SWPPP

Dear Mr. Welch:

The Construction Plans for the proposed project referenced above have been reviewed and have been found to be in compliance with the City of Lafayette Stormwater Code.

Please submit a Rule 5 Notice of Intent to the Indiana Department of Environmental Management, Office of Water Quality; include this letter as verification of our acceptance of the Construction Plans.

No error or omission in the plans, calculations or applications (whether said plans, calculations or applications have been reviewed by the Office of the City Engineer or not) shall permit or release the applicant and designer from constructing this work in any other manner than that provided for in the City Code.

Sincerely,

A handwritten signature in black ink, appearing to read "D. Griffie", is written over a circular stamp or seal.

CONSTRUCTION PLAN CERTIFICATION

By signing this Notice of Intent letter, I certify the following:

- A. The storm water quality measures included in the Construction Plan comply with the requirements of 327 IAC 15-5-6.5, 327 IAC 15-5-7, and 327 IAC 15-5-7.5;
B. the storm water pollution prevention plan complies with all applicable federal, state, and local storm water requirements;
C. the measures required under 327 IAC 15-5-7 and 327 IAC 15-5-7.5 will be implemented in accordance with the storm water pollution prevention plan;
D. if the projected land disturbance is One (1) acre or more, the applicable Soil and Water Conservation District or other entity designated by the Department, has been sent a copy of the Construction Plan for review;
E. storm water quality measures beyond those specified in the storm water pollution prevention plan will be implemented during the life of the permit if necessary to comply with 327 IAC 15-5-7; and
F. implementation of storm water quality measures will be inspected by trained individuals.

In addition to this form, I have enclosed the following required information:

- Verification by the reviewing agency of acceptance of the Construction Plan.
Proof of publication in a newspaper of general circulation in the affected area that notified the public that a construction activity is to commence, including all required elements contained in 327 IAC 15-5-5 (9). The Proof of Publication Must include company name and address, project name, address/location of the project, and the receiving stream to which storm water will be discharged. Following is a sample Proof of Publication:

'XERT Development Inc. (10 Willow Lane, Indianapolis, Indiana 46206) is submitting a Notice of Intent to the Indiana Department of Environmental Management of our intent to comply with the requirements of 327 IAC 15-5 to discharge storm water from construction activities associated with Water Garden Estates located at 24 Washout Lane, Indianapolis, Indiana 46206. Runoff from the project site will discharge to the White River. Questions or comments regarding this project should be directed to Walter Water of XERT Development Inc.'

- \$100 check or money order payable to the Indiana Department of Environmental Management. A permit fee is required for all NOI submittals (initial and renewal). A fee is not required for amendments.

SITE OWNER OF PROJECT RESPONSIBILITY STATEMENT

By signing this Notice of Intent letter, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information or violating the provisions of 327 IAC 15-5, including the possibility of fine and imprisonment for knowing violations.

Printed Name of Project Owner: Robert A. Przewindowski

Signature of Project Owner: [Handwritten Signature] Date (month, day, year): 2/24/20

This Notice of Intent must be signed by an individual meeting the signatory requirements in 327 IAC 15-4-3(g). All NOI submittals must include an original signature (FAX and photo copies are not acceptable).

Note: Within 48 hours of the initiation of construction activity, the project site owner must notify the appropriate plan review agency and IDEM, Office of Water Quality of the actual project start date if it varies from the date provided above.

Note: A permit issued under 327 IAC 15-5 is granted by the commissioner for a period of five (5) years from the date coverage commences. Once the five (5) year permit term duration is reached, a general permit issued under this rule will be considered expired, and as necessary for construction activity continuation, a new Notice of Intent letter (Renewal) is required to be submitted ninety (90) days prior to the termination of coverage. The submittal must include the NOI Letter, Proof of Publication, Fee, and verification that the plan for the project was approved (original verification of plan approval is acceptable provided the scope of the project has not changed from the original submittal).

Mail this form to: Indiana Department of Environmental Management Storm Water Program, IGCN, Room 1255 100 North Senate Avenue Indianapolis, IN 46204-2251

327 IAC 15-5-6 (a) also requires a copy of the completed Notice of Intent letter be submitted to the local Soil and Water Conservation District or other entity designated by the Department, where the land disturbing activity is to occur.

Questions regarding the development or implementation of the Construction Plan/Storm Water Pollution Prevention Plan should be directed to the local county Soil and Water Conservation District (SWCD). If you are unable to reach the SWCD or have other questions please direct those inquiries to the IDEM Storm Water Permit Coordinator at 317/233-1864 or 800/451-6027 ext.3-1864. Arconic Inc. (3131 East Main Street, Lafayette, Indiana 47905) is submitting this Notice of Intent to the Indiana Department of Environmental Management (IDEM) of our intent to comply with the requirements of 327 IAC 15-5 to discharge storm water from construction activities associated with the Elliott Ditch Levee Interim Measure project located near the intersection of Brady Lane and Concord Road in Lafayette, Indiana (Latitude: 40°23'47.00"N, Longitude: 86°51'33.03"W). The purpose of the project is to address impacts from polychlorinated biphenyls (PCBs) to soil present on and within a levee of Elliott Ditch. The Interim Measure Work Plan can be reviewed at the project repository maintained electronically on the Elliott Ditch Project website ([elliottditchproject.cccinc.com](http://elliottditchproject.cccinc.com)), or electronically on the IDEM's virtual file cabinet ([vfc.idem.in.gov](http://vfc.idem.in.gov), Document No. 82630193). Potential runoff from the project site will be managed via storm water controls to mitigate potential discharge to Elliott Ditch. Questions or comments regarding the project should be directed to the Elliott Ditch hotline (317) 613-4514, or [ElliottDitchQuestions@gmail.com](mailto:ElliottDitchQuestions@gmail.com).

November 5, 2020

Mr. Josh Mitchell  
Lafayette Renew  
1700 Wabash Avenue  
Lafayette, Indiana 47909

Dear Mr. Mitchell:

Subject: Rule 5 – Notice of Termination  
Arconic Lafayette Operations  
Lafayette, Indiana  
CEC Project 172-367.0028

On behalf of Arconic Corporation (Arconic), Civil & Environmental Consultants, Inc. (CEC) is pleased to provide Lafayette Renew the attached Notice of Termination (NOT) for Permit Number 12042 associated with the Elliott Ditch Levee Interim Measures Project (Project) in Lafayette, Indiana. This NOT is being submitted as certification that the Project Owner (Arconic) has met the terms and conditions of the General Permit Rule 327 IAC 15-5 (Rule 5) for termination of permit coverage under the National Pollutant Discharge Elimination System (NPDES). Since your visit to the Project to inspect the vegetation growth on October 19, 2020, storm water controls (i.e., silt fencing, straw waddles, and hay bales) have been removed. In addition, the Project site is stable and no additional land disturbing activities will be completed under this permit number.

CEC understands that following acceptance of the NOT, Lafayette Renew will formally submit the NOT to the Indiana Department of Environmental Management, Office of Water Quality. Please contact the undersigned at (865) 997-9997 should you have any questions.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

**FAX**

**E-mail address (if available)** Robert.Prezbindowski@arconic.com

## THIS "NOTICE OF TERMINATION" IS BEING SUBMITTED FOR THE FOLLOWING

To be eligible for termination, specific criteria must be met. There are three options for which a project may be considered for termination. These options include:

- Option # 1 Certification for change of ownership;
- Option # 2 Certification for termination of construction activities (327 IAC 15-5-8); and,
- Option # 3 Notice of termination to obtain early release from compliance with 327 IAC 15-5 (327 IAC 15-5-8).

Select one of the three options that apply to "Permit Termination" by checking the appropriate box, complete all information associated with that option, include required attachments (where applicable), and complete the "Project Site Owner Responsibility Statement" on page 2 of this form.

**Option # 1 Certification for change of ownership**

This option does not apply to the sale of individual lots within the permitted acreage; only the sale of the entire project site as originally permitted. The agency may accept termination for entire sections or phases of a project that are sold. To determine if a project is eligible, please contact the IDEM Storm Water Permits Coordinator.

By signing this "Notice of Termination," I certify the following:

A. The project was sold; I am no longer the project site owner as was designated in my "Notice of Intent". The new owner of the project site is:

**Company name (if applicable)**

**Project site owner's name (An individual)**

**Address (number and street)**

**City**

**State**

**ZIP code**

**Telephone number**

**FAX**

**E-mail Address (if available)**

B. I have notified the new project site owner of his/her responsibilities to comply with 327 IAC 15-5 and the requirements associated with the rule including filing a new "Notice of Intent."

**Option # 2 Certification for termination of construction activities**

By signing this "Notice of Termination," I certify the following:

- A. All land disturbing activities, including construction on all building lots, have been completed and the entire site has been stabilized;
- B. All temporary erosion and sediment control measures have been removed; and
- C. No future land disturbing activities will occur at the project site.

(Continued on reverse side)

**Option # 3 "Notice of Termination" to obtain early release from compliance with 327 IAC 15-5**

By signing this "Notice of Termination," I certify the following:

- A. The remaining, undeveloped acreage does not exceed five (5) acres, with contiguous areas not to exceed one (1) acre.
- B. A map of the project site, clearly identifying all remaining undeveloped lots, is attached to this letter. The map must be accompanied by a list of names and addresses of individual lot owners or individual lot operators of all undeveloped lots.
- C. All public and common improvements, including infrastructure, have been completed and permanently stabilized and have been transferred to the appropriate local entity.
- D. The remaining acreage does not pose a significant threat to the integrity of the infrastructure, adjacent properties, or water quality.
- E. All permanent storm water quality measures have been implemented and are operational.

Upon written notification to the department the project site owner certifies that he/she will:

- A. Notify all current individual lot owners and all subsequent lot owners of the remaining undeveloped acreage and acreage with construction activity that they are responsible for complying with section 7.5 of 327 IAC 15-5. The notice must inform the individual lot owners of the requirements to:
  - (1) install and maintain appropriate measures to prevent sediment from leaving the individual building lot; and
  - (2) maintain all erosion and sediment control measures that are to remain on-site as part of the construction plan.

**PROJECT SITE OWNER RESPONSIBILITY STATEMENT**

By signing this "Notice of Termination" letter, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed name of project site owner Robert Prezbindowski (Project Owner)

Signature of project site owner  Date (month, day, year) 11-4-20

This "Notice of Termination" must be signed by an individual meeting the signatory requirements in 327 IAC 15-4-3(g).

The submittal of a Notice of Termination requires an original (wet ink) signature; a fax or photocopies are not acceptable.

**SUBMITTAL OF THE "NOTICE OF TERMINATION"**

Please submit the completed "Notice of Termination" to the Indiana Department of Environmental Management (IDEM). The submittal to IDEM must be an original signature; a fax or photocopies are not acceptable. A copy of the "Notice of Termination" is required to also be submitted to the Soil and Water Conservation District (SWCD) or a Municipal Separate Storm Sewer System (MS4). The appropriate entity will typically be the agency that reviewed the construction/storm water pollution prevention plan associated with the project. The "Notice of Termination" shall be mailed to the IDEM at

Indiana Department of Environmental Management  
Storm Water Permits Coordinator  
100 North Senate Avenue  
Room 1255  
Indianapolis, IN 46204-2251

**Additional considerations**

It is not required by 327 IAC 15-5 that the termination is verified prior to submittal, however the SWCD or MS4, as the plan review agency, may elect to field verify project completion prior to the "Notice of Termination" submittal. Several MS4s require (by local ordinance) approval of all terminations prior to submitting the "Notice of Termination" to IDEM. Failure to submit this document to an MS4 that has adopted this provision may be a violation of the local MS4 ordinance.

If the agency participates, submit the completed Notice of Termination form to the SWCD or MS4. The request for termination will be reviewed for concurrence and either returned to the project site owner for submittal to IDEM or forwarded to IDEM on behalf of the project site owner.

**FOR AGENCY USE ONLY (FIELD VERIFICATION OF TERMINATION)**

The SWCD, an MS4 entity, or the Indiana Department of Environmental Management may inspect the project site to evaluate the adequacy of the remaining storm water quality measures and compliance with the Notice of Termination (NOT) requirements. If the inspecting entity finds that the project site owner has met the requirements of 327 IAC 15-5-8, the entity may elect to sign off on the project. It is the responsibility of the project site owner to file the NOT with the Indiana Department of Environmental Management.

- Accepted** The site referenced above has been inspected and it has been determined that the request to terminate this project is compliant with the requirements of 327 IAC 15-5. This form must be submitted to the IDEM for final processing.
- Denied** The site referenced above has been inspected and it has been determined that the request to terminate this project is not compliant with the requirements of 327 IAC 15-5. Continue to implement the Storm Water Pollution Prevention Plan and take appropriate measures to minimize the discharge of pollutants.

**APPENDIX IV**

**CONSTRUCTION-IN-A-FLOODWAY CERTIFICATE OF APPROVAL**

---

**CERTIFICATE OF APPROVAL**

**Application #: FW-29895-0**

This Certificate of Approval is a Permit for Construction under the authority of the Indiana Flood Control Act, IC 14-28-1 with 312 IAC 10 as administered by the Department of Natural Resources.

**Approval Issued To:** Arconic Inc, Robert Prezbindowski, 2300 North Wright Road, Alcoa, TN 37701

**Approval Issued By:**

**Mail Date:** 12/16/2019

James J. Hebenstreit, PE, Division of Water

**Permit Effective Date: 01/03/2020**

**Permit Expiration Date: 12/16/2021**

Pursuant to 312 IAC 2-5-1, this Permit becomes Effective eighteen (18) days from the Mail Date to provide a stay period for a Petition for Administrative Review with the Indiana Natural Resources Commission, Division of Hearings. Initiating construction authorized in this Permit prior to the Permit Effective Date constitutes a violation. This Permit is only valid until the Permit Expiration Date.

This Permit may be renewed one (1) time if a written request is received at the DNR, Division of Water, prior to the Permit Expiration Date.

---

**PROJECT INFORMATION:**

Waterbody: Elliott Ditch

County: Tippecanoe, Tippecanoe

Project Description Narrative: Approximately 3000' of an existing earthen levee will be remediated. Contaminated soils will be removed, transported outside of the floodway, and replaced with clean, cohesive soil from a borrow pit. Soil removal will occur within the 75' county drainage easement, outside the stream banks. The soil will be placed in 9" lifts, compacted to 95% Standard Proctor, and have 2:1 sideslopes. Disturbed areas will be stabilized with native grass species and matting will be used to stabilize slopes.

Project Location: Beginning at the Norfolk and Western Railroad crossing and continuing upstream approximately 3000' along the south bank near Lafayette

---

**PERMIT CONDITIONS:**

This Certificate of Approval is valid only if the construction project is in compliance with all Conditions in this Permit.

**DNR PROJECT SPECIFIC PERMIT CONDITIONS**

- 1) Implement the mitigation plan received at the Division of Water on October 21, 2019, by the end of fall 2021.

- 2) Yearly status reports must be submitted beginning from the date of permit approval until the mitigation site has been completely installed. Status reports must be submitted to the Central Region Environmental Biologist at the Division of Fish and Wildlife, 402 W. Washington St., RM W273, Indianapolis, IN 46204-2781 by December 31 of each year. Once installed, the mitigation site must be monitored for the survival of the plantings for a minimum of 3 years. A report as described above must be submitted to the biologist by December 31 of each year.
- 3) The replacement habitat areas must have a minimum survival of 75% of planted material (canopy and understory species' survival calculated separately) at the end of the monitoring period or additional trees and shrubs must be installed to meet the minimum survival. If the site fails to meet success in any year, replanting shall occur prior to the next monitoring period. An additional year of monitoring shall be required for each year of additional planting.
- 4) Place a restrictive covenant (developed in coordination with a DNR biologist) on the mitigation site property within 60 days of project initiation to protect the mitigation site from any future disturbance. A copy of the covenant must be provided to the Central Region Environmental Biologist by mailing it to the Division of Water, 402 W. Washington St, Room W264, Indianapolis, IN 46204-2641.
- 5) The species approved by the DNR in a mitigation plan or a planting plan become part of the permit. If modifications become necessary to the approved species, a Division of Fish and Wildlife biologist must approve all changes.
- 6) Post "Do Not Mow or Spray" signs or an approved equal along the boundary of the proposed mitigation area(s).
- 7) Revegetate all bare and disturbed areas that will not be mowed and maintained with a mixture of grasses, sedges, and wildflowers native to Central Indiana and specifically for stream bank/floodway stabilization purposes as soon as possible upon completion; turf-type grasses (including low-endophyte, friendly endophyte, and endophyte free tall fescue but excluding all other varieties of tall fescue) may be used in regularly mowed areas only.
- 8) Minimize and contain within the project limits inchannel disturbance and the clearing of trees and brush.
- 9) Do not work in the waterway from April 1 through June 30 without the prior written approval of the Division of Fish and Wildlife.
- 10) Do not cut any trees suitable for Indiana bat or Northern Long-eared bat roosting (greater than 5 inches dbh, living or dead, with loose hanging bark, or with cracks, crevices, or cavities) from April 1 through September 30.
- 11) Appropriately designed measures for controlling erosion and sediment must be implemented to prevent sediment from entering the stream or leaving the construction site; maintain these measures until construction is complete and all disturbed areas are stabilized.
- 12) Seed and protect all disturbed streambanks and slopes not protected by other methods that are 3:1 or steeper with erosion control blankets that are heavy-duty, biodegradable, and net free or that use loose-woven / Leno-woven netting to minimize the entrapment and snaring of small-bodied wildlife such as snakes and turtles (follow manufacturer's recommendations for selection and installation); seed and apply mulch on all other disturbed areas.
- 13) Yearly status reports must be submitted beginning from the date of permit approval until the mitigation site has been completely installed. Status reports must be submitted to the Central Region Environmental Biologist at the Division of Fish and Wildlife, 402 W. Washington St., RM W273, Indianapolis, IN 46204-2781 by December 31 of each year. Once installed, the mitigation site must be monitored for the survival of the plantings for a minimum of three years. A report must be submitted to the biologist by December 31 of each year to monitor the initiation, progress, and success of the plantings. The report shall include a narrative that describes the activity accomplished to date, the number of acres planted, the number of plants planted, the list of species planted on site, appropriate pictures of vegetative plantings, and the estimated survival of planted material.
- 14) Do not leave felled trees, brush, or other debris in the floodway\*.
- 15) Except for the material used as backfill as shown on the plans submitted for the permit application, place all excavated material landward of the floodway\*.
- 16) Upon completion of the project, remove all construction debris from the floodway\*.

\* Note: For regulatory purposes, the floodway is defined on the attached Floodway Map.

#### DNR PROJECT GENERAL PERMIT CONDITIONS

- 1) Any modifications or additional construction beyond what was shown on plans received at the Division of Water shall require an additional review and approval from the Department of Natural Resources.
- 2) This Permit must be posted and maintained at the project site until the project is completed
- 3) This Permit shall not be assigned or transferred without the prior written approval of the Department of Natural Resources.
- 4) If any archaeological artifacts or human remains are uncovered during construction, federal law and regulations (16 USC 470, et seq.; 36 CFR 800.11, et al) and State Law (IC 14-21-1) require that work must stop and that the discovery must be reported to the Division of Historic Preservation and Archaeology within 2 business days at (317) 232-1646.
- 5) This Permit may be revoked by the Department of Natural Resources for violation of any condition or applicable statute or rule.
- 6) The Department of Natural Resources shall have the right to enter upon the site of the permitted activity for the purpose of inspecting the work authorized under this Permit.

Certificate of Approval Attachments: DNR\_FloodplainMap.pdf

---

**RIGHT TO ADMINISTRATIVE REVIEW:**

A party may appeal this Department of Natural Resources Action through the administrative review procedures found in the Administrative Orders and Procedures Act, IC 4-21.5, and the rules promulgated thereunder 312 IAC 3-1. If an appeal is filed, the final agency determination will be made by the Natural Resources Commission following a legal proceeding conducted before an Administrative Law Judge. The Department of Natural Resources will be represented by legal counsel at all stages of administrative review.

In order to obtain an administrative review, a written petition must be filed with the Division of Hearings within 18 days of the Mail Date of the Action. The petition must contain specific reasons for the appeal and indicate the portion or portions of the project to which the appeal pertains. The petition must be addressed to the Division of Hearings, Indiana Government Center North, Room N103, 100 North Senate Avenue, Indianapolis, Indiana 46204

**DATE**

**April 22, 2020**

*NOTE: Generators are required to make a good faith effort to comply with all applicable regulations and may be subject to enforcement action if their determination is incorrect. EPA's PCB Penalty Policy states: "The lack of knowledge of a particular requirement does not necessarily reduce culpability, since the Agency has no intention of encouraging ignorance of the PCB rules. The test will be whether the violator knew or should have known of the relevant requirement or the possible dangers of his actions. As a general matter, any electric utility, and any company with PCBs, is deemed to have knowledge of all aspects of TSCA and the PCB regulation. TSCA is a strict liability statute, and there is no requirement that a violator's conduct be willful or knowing for it to be found in violation of TSCA or its implementing regulations."*

**1. Are the PCBs detected in the waste the result of a spill of PCBs that occurred prior to April 18, 1978 and the actual PCB concentration of the waste is less than 50 PPM? See Approved Work Plan included with this submittal.**

- Yes (Please provide supporting documentation.\* No further questions.)
- No (Please proceed to Question 2)
- Following a diligent investigation of available information, I am unable to locate any information which indicates that a spill of PCBs occurred subsequent to April 18, 1978 or that the original source was  $\geq$ 50 ppm.

**2. Did the spill of PCB material in the waste occur on or after April 18, 1978 and the source was an authorized source with PCBs less than 50 PPM?**

- Yes (Please provide supporting documentation.\* No further questions.)
- No (Please proceed to Question 3)
- Following a diligent investigation of available information, I am unable to locate any information which indicates that the original source was unauthorized or  $\geq$ 50 ppm PCBs and the actual PCB concentration of the waste is < 50 ppm PCBs.

**3. Does the material as generated meet the definition of a PCB Remediation Waste as defined in 40 CFR 761.3? Note: 40 CFR 761.50(b)(3)(iii) The owner or operator of a site containing PCB remediation waste has the burden of proving the date that the waste was placed in a land disposal facility, spilled, or otherwise released into the environment, and the concentration of the original spill.**

- Yes (If yes, disposal must be in accordance with 40 CFR 761.61. Please select applicable disposal option below.)\*\*
- No (Please proceed to Question 4)

**PCB REMEDIATION WASTE APPLICABLE DISPOSAL OPTION:**

- Managed under 40 CFR 761.61(a) Self-Implementing Plan (Please provide SIP and EPA approval if received\*\*\*)
- Managed under 40 CFR 761.61(b) Performance-Based Option (Subtitle C with TSCA Authorization disposal only)
- Managed under 40 CFR 761.61(c) Risk-Based Plan (Please provide Plan and EPA approval)

**4. Does the material as generated meet the definition of PCB Bulk Product Waste as defined in 40 CFR 761.3\*\*\*? See approved Work Plan included with this submittal.**

- Yes (Please specify applicable clean-up option below)
- No (Please provide WM with detailed description regarding the waste and the process generating it. Describe what the source of PCBs is and how the PCBs came to be in the waste. Examples: Excluded PCB Products, PCB Liquids, PCB Items, PCB Household Waste, Natural Gas Pipeline Wastes, PCB R&D Waste, PCB/Radioactive Waste, Porous Surfaces).

**PCB BULK PRODUCT WASTE APPLICABLE CLEAN-UP OPTION:**

- The waste covered by this certification is PCB bulk product waste regulated under 761.62(b)(1)(i) such as plastics; preformed or molded rubber parts or components; applied dried paints, varnishes, waxes, or other similar coatings or sealants; caulking; Galbestos; non-liquid building demolition debris; non-liquid PCB bulk product waste from the shredding of automobile or household appliances from which PCB small capacitors have been removed prior to shredding, or intact non-leaking fluorescent light ballasts. Based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), this waste may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)
- The waste covered by this certification is other PCB bulk product waste as regulated under 761.62(b)(1)(ii) and, based on sampling conducted in accordance with the protocols set out in Subpart R of Part 761, leaches at less than 10 micrograms per liter (ug/L) of water measured using a procedure used to simulate leachate generation. This waste, based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)
- The waste covered by this certification is PCB bulk product waste OTHER THAN that described in either category above (e.g. paper or felt gaskets contaminated by liquid PCBs) and is regulated under 761.62(b)(2). Based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), this waste may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)

\* Sampling and reporting PCB concentrations in samples must be done in accordance with 40 CFR 761 Subpart R.

\*\* Generator must provide written notice to disposal facility at least 15 days prior to first shipment for either PCB Remediation Wastes managed under a SIP or PCB Bulk Product Wastes. Completing the applicable sections above and signing this form in conjunction with completed WM EZ Profile may serve as your 15-day notification. Total quantity to be shipped and highest PCB concentration must be provided.

\*\*\*By signing this form, the generator confirms that the attached self-implementing notification was submitted to the applicable regulatory authority for approval 30 days prior to the commencement of cleanup activity. The regulatory authority either approved or did not respond within 30 days of receiving the notification; therefore, it is assumed that the notification is approved.

## PCB CERTIFICATION FOR SUBTITLE D FACILITIES AND SUBTITLE C NON-TSCA FACILITIES

This form is intended to support waste characterization into a Subtitle D or a Non-Toxic Substances and Control Act (TSCA) Approved Subtitle C facility for non-PCB wastes (e.g. non-TSCA wastes), certain TSCA-Regulated PCB Remediation Wastes, or certain TSCA-Regulated PCB Bulk Product Wastes.

**Non-TSCA Wastes:** PCB-contaminated wastes for which the source PCB concentration was less than 50 ppm are not regulated under TSCA. This includes certain PCB manufacturing processes and products which appear at concentrations less than 50 ppm. See 40 CFR 761.3, 'Excluded Manufacturing Process' and 'Excluded PCB products'. See also EPA's June 2014 PCB Q & A document, 761.61 'As Found Concentration'.

**PCB Remediation Waste** is defined in 40 CFR 761.3 with specific disposal options identified in 40 CFR 761.61. In general, PCB Remediation Waste means waste containing PCBs as a result of a spill, release, or other unauthorized disposal at the following concentrations:

- Materials disposed of prior to April 18, 1978, that are currently at concentrations  $\geq 50$  ppm PCBs, regardless of the concentration of the original spill;
- materials which are currently at any volume or concentration where the original source was  $\geq 500$  ppm PCBs beginning on April 18, 1978, or  $\geq 50$  ppm PCBs beginning on July 2, 1979; and
- materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under this part.

**PCB Remediation Waste** means soil, rags, and other debris generated as a result of any PCB spill cleanup, including, but not limited to:

- Environmental media containing PCBs, such as soil and gravel;
- Dredged materials, such as sediments, settled sediment fines, and aqueous decantate from sediment;
- Sewage sludge containing  $< 50$  PPM PCBs and not in use according to 40 CFR 761.20(a)(4);
- PCB sewage sludge;
- Commercial or industrial sludge contaminated as the result of a spill of PCBs including sludges located in or removed from any pollution control device;
- Aqueous decantate from an industrial sludge.
- Buildings and other man-made structures (such as concrete floors, wood floors, or walls contaminated from a leaking PCB or PCB-Contaminated Transformer), porous surfaces, and non-porous surfaces.
- Personal Protective Equipment (PPE) or other solid cleaning material with any concentration of PCBs generated as a result of any PCB remediation waste spill cleanup.

The PCB regulations for disposal of PCB Remediation Waste allow generators to manage the waste under three specific scenarios: 1) Self-implementing on-site cleanup and disposal; 2) Performance-based disposal, or 3) Risk-based disposal.

**PCB Bulk Product Waste** is defined in 40 CFR 761.3 with specific disposal options identified in 40 CFR 761.62. PCB Bulk Product Waste means waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal was  $\geq 50$  ppm PCBs. PCB bulk product waste does not include PCBs or PCB Items regulated for disposal under §761.60(a) through (c), §761.61, §761.63, or §761.64. PCB bulk product waste includes, but is not limited to:

- Non-liquid bulk wastes or debris from the demolition of buildings and other man-made structures manufactured, coated, or serviced with PCBs. PCB bulk product waste does not include debris from the demolition of buildings or other man-made structures that is contaminated by spills from regulated PCBs which have not been disposed of, decontaminated, or otherwise cleaned up in accordance with subpart D of this part.
- PCB-containing wastes from the shredding of automobiles, household appliances, or industrial appliances.
- Plastics (such as plastic insulation from wire or cable; radio, television and computer casings; vehicle parts; or furniture laminates); preformed or molded rubber parts and components; applied dried paints, varnishes, waxes or other similar coatings or sealants; caulking; adhesives; paper; Galbestos; sound deadening or other types of insulation; and felt or fabric products such as gaskets.
- Fluorescent light ballasts containing PCBs in the potting material.

On October 24, 2012, the USEPA issued a memorandum titled 'PCB Bulk Product Waste Reinterpretation'. The reinterpretation provides the ability to dispose of any building material, contaminated by adjacent PCB bulk product waste (e.g., caulk, paint, mastics, and sealants), in accordance with the PCB bulk product waste regulations.

- The migration of PCBs from PCB bulk product waste, such as caulk or paint, can occur to the surrounding building materials. This reinterpretation allows building material "coated or serviced" with PCB bulk product waste (e.g., caulk, paint, mastics, sealants) at the time of designation for disposal to be managed as a PCB bulk product waste, even if the PCBs have migrated from the overlying bulk product waste to the substrate (i.e., building materials), provided there is no other source of PCB contamination on or in the substrate (i.e., building materials). The PCB contamination can only be from the PCB bulk product waste and not from another source (e.g., PCB transformer).
- Conversely, PCB-contaminated building material (i.e., substrate) from which a PCB bulk product waste has been removed (i.e., no longer attached to the building materials) would be considered a PCB remediation waste. Contaminated building materials that remain in place, after the PCB bulk product waste (e.g., caulk, paint, mastics, and sealants) has been removed, continue to be considered and managed as PCB remediation waste. For example, if the PCB material has already been removed or flaked off at the time of designation for disposal, the building material would be deemed a PCB remediation waste.

Requested Facility: Oak Ridge RDF (2905 South, 150 East, Logansport, IN 46947)  Unsure Profile Number:                       
 Multiple Generator Locations (Attach Locations)  Request Certificate of Disposal  Renewal? Original Profile Number:                     

**A. GENERATOR INFORMATION (MATERIAL ORIGIN)**

- 1. Generator Name: Arconic Corp.
- 2. Site Address: 3131 Main Street  
(City, State, ZIP) Lafayette, Indiana, 47905
- 3. County: Tippecanoe
- 4. Contact Name: Mr. J Matt Bruck (Consultant)
- 5. Email: mbruck@cecinc.com
- 6. Phone: 513-309-1966 7. Fax:
- 8. Generator EPA ID: IND 005 478 094  N/A
- 9. State ID:                       N/A

**C. MATERIAL INFORMATION**

- 1. Common Name: PCB remediation waste soil from the Elliott Ditch Levee Remediation  
Describe Process Generating Material:  See Attached  

Removal of PCB contaminated soil (PCB concentration <50 ppm) from the Elliott Ditch Interim Measure project (i.e., Levee Soil Remediation).
- 2. Material Composition and Contaminants:  See Attached  

1. PCBs (CAS Number 1336-36-3)	Trace - <50 ppm
2. Soil	80% to 100%
3. Rocks, Small Trees, Brush	0% to 20%
4. PPE, Poly Sheeting, Woody/Metal Debris	0% to 5%

Total comp. must be equal to or greater than 100%  ≥100%
- 3. State Waste Codes:                       N/A
- 4. Color: Black, brown, light brown
- 5. Physical State at 70°F:  Solid  Liquid  Other:
- 6. Free Liquid Range Percentage:                      to                       N/A
- 7. pH: 6 to 9  N/A
- 8. Strong Odor:  Yes  No Describe:
- 9. Flash Point:  <140°F  140°-199°F  ≥200°  N/A

**E. ANALYTICAL AND OTHER REPRESENTATIVE INFORMATION**

- 1. Analytical attached  Yes  
Please identify applicable samples and/or lab reports:  

- Eurofins Lab Report 500-177670-1 (RCRA data)  
- TestAmerica Lab Reports 240-87591-1, 240-91496-1, 240-97885-1 (see Analytical Results Summary Table provided for reference)
- 2. Other information attached (such as MSDS)?  Yes

**G. GENERATOR CERTIFICATION (PLEASE READ AND CERTIFY BY SIGNATURE)**

By signing this EZ Profile™ form, I hereby certify that all information submitted in this and all attached documents contain true and accurate descriptions of this material, and that all relevant information necessary for proper material characterization and to identify known and suspected hazards has been provided. Any analytical data attached was derived from a sample that is representative as defined in 40 CFR 261 - Appendix 1 or by using an equivalent method. All changes occurring in the character of the material (i.e., changes in the process or new analytical) will be identified by the Generator and be disclosed to Waste Management prior to providing the material to Waste Management.

If I am an agent signing on behalf of the Generator, I have confirmed with the Generator that information contained in this Profile is accurate and complete.

Name (Print): Mr. Robert Prezbindowski Date:

### D. REGULATORY INFORMATION

**Only questions with a “Yes” response in Section D on the EZ Profile™ form (page 1) need to be answered here.**

**1. EPA Hazardous Waste**

a. Please list all USEPA listed and characteristic waste code numbers:

- b. Is the material subject to the Alternative Debris standards (40 CFR 268.45)?  Yes  No
- c. Is the material subject to the Alternative Soil standards (40 CFR 268.49)? → If Yes, complete question 4.  Yes  No
- d. Is the material exempt from Subpart CC Controls (40 CFR 264.1083)?  Yes  No  
 → If Yes, please check **one** of the following:
  - Waste meets LDR or treatment exemptions for organics (40 CFR 264.1082(c)(2) or (c)(4))
  - Waste contains VOCs that average <500 ppmw (CFR 264.1082(c)(1)) – will require annual update.

2. State Hazardous Waste → Please list all state waste codes: \_\_\_\_\_

3. For material that is Treated, Delisted, or Excluded → Please indicate the category, below:  
 Delisted Hazardous Waste       Excluded Waste under 40 CFR 261.4 → Specify Exclusion: \_\_\_\_\_  
 Treated Hazardous Waste Debris       Treated Characteristic Hazardous Waste → If checked, complete question 4.

4. Underlying Hazardous Constituents → Please list all Underlying Hazardous Constituents:

**5. Industries regulated under Benzene NESHAP include petroleum refineries, chemical manufacturing plants, coke by-product recovery plants, and TSDFs.**

- a. Are you a TSDF? → If yes, please complete Benzene NESHAP questionnaire. If not, continue.  Yes  No
- b. Does this material contain benzene?  Yes  No  
 1. If yes, what is the flow weighted average concentration? \_\_\_\_\_ ppmw
- c. What is your facility's current total annual benzene quantity in Megagrams?  <1 Mg    1–9.99 Mg    ≥10 Mg
- d. Is this waste soil from a remediation?  Yes  No  
 1. If yes, what is the benzene concentration in remediation waste? \_\_\_\_\_ ppmw
- e. Does the waste contain >10% water/moisture?  Yes  No
- f. Has material been treated to remove 99% of the benzene or to achieve <10 ppmw?  Yes  No
- g. Is material exempt from controls in accordance with 40 CFR 61.342?  Yes  No  
 → If yes, specify exemption: \_\_\_\_\_
- h. Based on your knowledge of your waste and the BWON regulations, do you believe that this waste stream is subject to treatment and control requirements at an off-site TSDF?  Yes  No

6. 40 CFR 63 GGGGG → Does the material contain <500 ppmw VOHAPs at the point of determination?  Yes  No

7. CERCLA or State-Mandated clean up → Please submit the Record of Decision or other documentation with process information to assist others in the evaluation for proper disposal. A “Determination of Acceptability” may be needed for CERCLA wastes not going to a CERCLA approved facility.

8. NRC or state regulated radioactive or NORM Waste → Please identify Isotopes and pCi/g: \_\_\_\_\_

# PCB CERTIFICATION FOR SUBTITLE D FACILITIES AND SUBTITLE C NON-TSCA FACILITIES

(NOTE: Portions of associated TSCA regulations and EPA guidance are included on Page 2 of this certification form)

Profile Number: 614725IN

I certify to Waste Management that within my company I have knowledge concerning the accuracy of the following representations and that the following representations are correct to the best of my knowledge.

SIGNATURE OF GENERATOR

Digitally signed by robert.prezbindowski@arconic.com  
DN: cn=robert.prezbindowski@arconic.com  
Date: 2020.04.23 11:19:00 -04'00'

PRINT NAME

Robert Prezbindowski

TITLE

Remediation Manager

COMPANY NAME

Arconic Corp.

WM RECEIVING FACILITY

Oak Ridge RDF, Logansport, IN

DATE

April 22, 2020

**NOTE:** Generators are required to make a good faith effort to comply with all applicable regulations and may be subject to enforcement action if their determination is incorrect. EPA's PCB Penalty Policy states: "The lack of knowledge of a particular requirement does not necessarily reduce culpability, since the Agency has no intention of encouraging ignorance of the PCB rules. The test will be whether the violator knew or should have known of the relevant requirement or the possible dangers of his actions. As a general matter, any electric utility, and any company with PCBs, is deemed to have knowledge of all aspects of TSCA and the PCB regulation. TSCA is a strict liability statute, and there is no requirement that a violator's conduct be willful or knowing for it to be found in violation of TSCA or its implementing regulations."

1. Are the PCBs detected in the waste the result of a spill of PCBs that occurred prior to April 18, 1978 and the actual PCB concentration of the waste is less than 50 PPM? See Approved Work Plan included with this submittal.

- Yes (Please provide supporting documentation.\* No further questions.)  
 No (Please proceed to Question 2)  
 Following a diligent investigation of available information, I am unable to locate any information which indicates that a spill of PCBs occurred subsequent to April 18, 1978 or that the original source was  $\geq 50$  ppm.

2. Did the spill of PCB material in the waste occur on or after April 18, 1978 and the source was an authorized source with PCBs less than 50 PPM?

- Yes (Please provide supporting documentation.\* No further questions.)  
 No (Please proceed to Question 3)  
 Following a diligent investigation of available information, I am unable to locate any information which indicates that the original source was unauthorized or  $\geq 50$  ppm PCBs and the actual PCB concentration of the waste is  $< 50$  ppm PCBs.

3. Does the material as generated meet the definition of a PCB Remediation Waste as defined in 40 CFR 761.3? Note: 40 CFR 761.50(b)(3)(iii) The owner or operator of a site containing PCB remediation waste has the burden of proving the date that the waste was placed in a land disposal facility, spilled, or otherwise released into the environment, and the concentration of the original spill.

- Yes (If yes, disposal must be in accordance with 40 CFR 761.61. Please select applicable disposal option below.)\*\*  
 No (Please proceed to Question 4)

**PCB REMEDIATION WASTE APPLICABLE DISPOSAL OPTION:**

- Managed under 40 CFR 761.61(a) Self-Implementing Plan (Please provide SIP and EPA approval if received\*\*\*)  
 Managed under 40 CFR 761.61(b) Performance-Based Option (Subtitle C with TSCA Authorization disposal only)  
 Managed under 40 CFR 761.61(c) Risk-Based Plan (Please provide Plan and EPA approval)

4. Does the material as generated meet the definition of PCB Bulk Product Waste as defined in 40 CFR 761.3\*\*\*? See approved Work Plan included with this submittal.

- Yes (Please specify applicable clean-up option below)  
 No (Please provide WM with detailed description regarding the waste and the process generating it. Describe what the source of PCBs is and how the PCBs came to be in the waste. Examples: Excluded PCB Products, PCB Liquids, PCB Items, PCB Household Waste, Natural Gas Pipeline Wastes, PCB R&D Waste, PCB/Radioactive Waste, Porous Surfaces).

**PCB BULK PRODUCT WASTE APPLICABLE CLEAN-UP OPTION:**

- The waste covered by this certification is PCB bulk product waste regulated under 761.62(b)(1)(i) such as plastics; preformed or molded rubber parts or components; applied dried paints, varnishes, waxes, or other similar coatings or sealants; caulking; Galbestos; non-liquid building demolition debris; non-liquid PCB bulk product waste from the shredding of automobile or household appliances from which PCB small capacitors have been removed prior to shredding, or intact non-leaking fluorescent light ballasts. Based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), this waste may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)
- The waste covered by this certification is other PCB bulk product waste as regulated under 761.62(b)(1)(ii) and, based on sampling conducted in accordance with the protocols set out in Subpart R of Part 761, leaches at less than 10 micrograms per liter (ug/L) of water measured using a procedure used to simulate leachate generation. This waste, based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)
- The waste covered by this certification is PCB bulk product waste OTHER THAN that described in either category above (e.g. paper or felt gaskets contaminated by liquid PCBs) and is regulated under 761.62(b)(2). Based on analysis of the waste in the shipment or general knowledge of the waste stream (or similar material), this waste may include components containing PCBs at greater than or equal to 50 ppm. (Attach supporting documentation.\*)

\* Sampling and reporting PCB concentrations in samples must be done in accordance with 40 CFR 761 Subpart R.

\*\* Generator must provide written notice to disposal facility at least 15 days prior to first shipment for either PCB Remediation Wastes managed under a SIP or PCB Bulk Product Wastes. Completing the applicable sections above and signing this form in conjunction with completed WM EZ Profile may serve as your 15-day notification. Total quantity to be shipped and highest PCB concentration must be provided.

\*\*\*By signing this form, the generator confirms that the attached self-implementing notification was submitted to the applicable regulatory authority for approval 30 days prior to the commencement of cleanup activity. The regulatory authority either approved or did not respond within 30 days of receiving the notification; therefore, it is assumed that the notification is approved.

## PCB CERTIFICATION FOR SUBTITLE D FACILITIES AND SUBTITLE C NON-TSCA FACILITIES

This form is intended to support waste characterization into a Subtitle D or a Non-Toxic Substances and Control Act (TSCA) Approved Subtitle C facility for non-PCB wastes (e.g. non-TSCA wastes), certain TSCA-Regulated PCB Remediation Wastes, or certain TSCA-Regulated PCB Bulk Product Wastes.

**Non-TSCA Wastes:** PCB-contaminated wastes for which the source PCB concentration was less than 50 ppm are not regulated under TSCA. This includes certain PCB manufacturing processes and products which appear at concentrations less than 50 ppm. See 40 CFR 761.3, 'Excluded Manufacturing Process' and 'Excluded PCB products'. See also EPA's June 2014 PCB Q & A document, 761.61 'As Found Concentration'.

**PCB Remediation Waste** is defined in 40 CFR 761.3 with specific disposal options identified in 40 CFR 761.61. In general, PCB Remediation Waste means waste containing PCBs as a result of a spill, release, or other unauthorized disposal at the following concentrations:

- Materials disposed of prior to April 18, 1978, that are currently at concentrations  $\geq 50$  ppm PCBs, regardless of the concentration of the original spill;
- materials which are currently at any volume or concentration where the original source was  $\geq 500$  ppm PCBs beginning on April 18, 1978, or  $\geq 50$  ppm PCBs beginning on July 2, 1979; and
- materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under this part.

**PCB Remediation Waste** means soil, rags, and other debris generated as a result of any PCB spill cleanup, including, but not limited to:

- Environmental media containing PCBs, such as soil and gravel;
- Dredged materials, such as sediments, settled sediment fines, and aqueous decantate from sediment;
- Sewage sludge containing  $< 50$  PPM PCBs and not in use according to 40 CFR 761.20(a)(4);
- PCB sewage sludge;
- Commercial or industrial sludge contaminated as the result of a spill of PCBs including sludges located in or removed from any pollution control device;
- Aqueous decantate from an industrial sludge.
- Buildings and other man-made structures (such as concrete floors, wood floors, or walls contaminated from a leaking PCB or PCB-Contaminated Transformer), porous surfaces, and non-porous surfaces.
- Personal Protective Equipment (PPE) or other solid cleaning material with any concentration of PCBs generated as a result of any PCB remediation waste spill cleanup.

The PCB regulations for disposal of PCB Remediation Waste allow generators to manage the waste under three specific scenarios: 1) Self-implementing on-site cleanup and disposal; 2) Performance-based disposal, or 3) Risk-based disposal.

**PCB Bulk Product Waste** is defined in 40 CFR 761.3 with specific disposal options identified in 40 CFR 761.62. PCB Bulk Product Waste means waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal was  $\geq 50$  ppm PCBs. PCB bulk product waste does not include PCBs or PCB Items regulated for disposal under §761.60(a) through (c), §761.61, §761.63, or §761.64. PCB bulk product waste includes, but is not limited to:

- Non-liquid bulk wastes or debris from the demolition of buildings and other man-made structures manufactured, coated, or serviced with PCBs. PCB bulk product waste does not include debris from the demolition of buildings or other man-made structures that is contaminated by spills from regulated PCBs which have not been disposed of, decontaminated, or otherwise cleaned up in accordance with subpart D of this part.
- PCB-containing wastes from the shredding of automobiles, household appliances, or industrial appliances.
- Plastics (such as plastic insulation from wire or cable; radio, television and computer casings; vehicle parts; or furniture laminates); preformed or molded rubber parts and components; applied dried paints, varnishes, waxes or other similar coatings or sealants; caulking; adhesives; paper; Galbestos; sound deadening or other types of insulation; and felt or fabric products such as gaskets.
- Fluorescent light ballasts containing PCBs in the potting material.

On October 24, 2012, the USEPA issued a memorandum titled 'PCB Bulk Product Waste Reinterpretation'. The reinterpretation provides the ability to dispose of any building material, contaminated by adjacent PCB bulk product waste (e.g., caulk, paint, mastics, and sealants), in accordance with the PCB bulk product waste regulations.

- The migration of PCBs from PCB bulk product waste, such as caulk or paint, can occur to the surrounding building materials. This reinterpretation allows building material "coated or serviced" with PCB bulk product waste (e.g., caulk, paint, mastics, sealants) at the time of designation for disposal to be managed as a PCB bulk product waste, even if the PCBs have migrated from the overlying bulk product waste to the substrate (i.e., building materials), provided there is no other source of PCB contamination on or in the substrate (i.e., building materials). The PCB contamination can only be from the PCB bulk product waste and not from another source (e.g., PCB transformer).
- Conversely, PCB-contaminated building material (i.e., substrate) from which a PCB bulk product waste has been removed (i.e., no longer attached to the building materials) would be considered a PCB remediation waste. Contaminated building materials that remain in place, after the PCB bulk product waste (e.g., caulk, paint, mastics, and sealants) has been removed, continue to be considered and managed as PCB remediation waste. For example, if the PCB material has already been removed or flaked off at the time of designation for disposal, the building material would be deemed a PCB remediation waste.

---

Hi Patty,

Please find the attached PCB Certification signed by Arconic. It is our understanding from WM that this PCB Certification will serve as the 15 day predisposal notification. Excavation and disposal activities are scheduled to begin mid-May, 2020. Should you have any questions, please feel free to contact me.

Thank you,  
Garrett
